Plant Responses to the Dark Scenario Péter Poór,Attila Ördög,M. Iqbal R. Khan,Chentao Lin,2021-07-27 **Plant Responses to Salt Stress** Keni Cota-Ruiz,Zulfiqar Ali Sahito,Adalberto Benavides-Mendoza,2024-09-13 Feeding the growing world population will require a significant increase in agricultural production However food overproduction needs to be achieved while crops and plants face salinized soils water deficits lesser arable lands drought and climate change among other factors Salinity impairs plant functioning at multiple levels For instance excess salt contents cause higher osmotic pressures nutritional disorders seed germination inhibition and growth suppression Plants respond to this aggression by activating several metabolic pathways including but not limited to regulating hormone dependent processes repressing growth related genes and eliciting the antioxidant response system Worldwide lands under irrigation practices are experiencing higher salt content impacting plant performance and causing significant drops in yields Therefore understanding how cultivars and plants respond to adverse environments such as salt excess in soils as well as investigating novel approaches to boost stressed plant physiological performance are vital components that need to be addressed if we are to achieve food security Multiple genes involved in the ABA signaling pathways are known to respond and start plant adaptive responses when facing salt stress In addition several transcription factors such as the phytochromes and zinc finger proteins play roles in regulating the morphological responses of plants under stress Antioxidant enzymes are also upregulated in response to higher content of salt Recently nanobiotechnological approaches aimed at delivering cargoes such as micronutrients or chemicals in a cell specific manner are a promising alternative to aid plants in combating stress Similarly using nanofertilizers shows favorable effects in plants under hostile environments CRISPR CAS is an emerging powerful and feasible tool to modify genes and be applied to plants to make them more tolerant to salt in excess **Plant Responses to Environmental Stresses Based on Physiological and Functional Ecology** Kaixiong Xing,Chen Chen,Hongbo Li,Deliang Kong,2023-10-31 Plants require a proper balance of matter and energy to maintain their survival and reproduction Biotic and or abiotic stresses in diverse environments could influence plant photosynthesis water and nutrient acquisition and utilization Through the lens of plant physiological and functional ecology the study of responses of individual plant traits and or integration of plant responses to environmental change has been well developed The variation of plant physiological characteristics and functional traits has been recognized with hundreds of high quality papers on topics of plant responses to environmental stresses For now despite the increasing number of studies trying to establish a linkage between plant physiological processes and functional traits these covariations have received limited theoretical and experimental verification This knowledge gap hampers our ability to understand and predict the comprehensive responses of plants to environmental stresses at different scales Identification and functional analysis of differentially expressed genes in plant response to abiotic stresses Xuke Lu,Waqar Afzal Malik,Ting Zhao,Yupeng Cui,Libei Li,2023-08-24 **Structural**

Bioinformatics and Biophysical Approaches for Understanding the Plant Responses to Biotic and Abiotic Stress

Raul Antonio Sperotto, Maria Hrmova, Steffen P. Graether, Luis Fernando Saraiva Macedo Timmers, 2022-10-21

Understanding the Molecular Mechanisms of Plant Responses to Abiotic Stress Sang Yeol Lee, Dae-Jin Yun, Jose M. Pardo, Motoaki Seki, Yan Guo, Abel Rosado, 2020-02-20 Plant responses to environmental stress are governed by complex molecular and biochemical signal transduction processes which act in coordination to determine tolerance or sensitivity at the whole plant level Upon exposure to abiotic stress plants express a sophisticated coordinated response to reprogram interconnected defense networks and metabolic pathways by alterations in the transcription translation and post translational modification of defense related genes and proteins Traditionally physiological and phenotypic responses were the major ones to be collected in plant stress biology However modern studies include the identification of key genes that influence stress tolerance and plant growth under the imposing stress and the verification of gene functions using knock out mutants or overexpression lines In addition genomics has become a necessary tool for the understanding of plant stress responses at the whole genome levels The identification of stress tolerant plant resources and the investigation of the functional role of the genetic variants is also a valuable tool in this research field Recently the advent of CRISPR Cas genome editing technology enables these variations to be introduced in crops for improved stress tolerance traits Through the understanding of the molecular mechanisms involved in plant signaling in response to abiotic stress and crop performance characters under stress conditions we hope to open new ways for the breeding of superior crops **Plant Responses to**

Biotic and Abiotic Stresses: Lessons from Cell Signaling Sylvain Jeandroz, Olivier Lamotte, 2017-12-28 Facing stressful conditions imposed by their environment and affecting their growth and their development throughout their life cycle plants must be able to perceive to process and to translate different stimuli into adaptive responses Understanding the organism coordinated responses involves a fine description of the mechanisms occurring at the cellular and molecular level A major challenge is also to understand how the large diversity of molecules identified as signals sensors or effectors could drive a cell to the appropriate plant response and to finally cope with various environmental cues In this Research Topic we aim to provide an overview of various signaling mechanisms or to present new molecular signals involved in stress response and to demonstrate how basic fundamental research on cell signaling will help to understand stress responses at the whole plant level **Plant Responses and Tolerance to Metal/Metalloid Toxicity** Mirza Hasanuzzaman, Masayuki Fujita, 2020-06-16

This Special Issue provides 15 research articles and 4 comprehensive review articles on various aspects of plant metal metalloid interactions Up to date information on plant responses to metals metalloids are published Various mechanisms of plant tolerance to metals metalloids toxicity are presented Exogenous applications of mitigating metals metalloids toxicity are discussed Sustainable technologies in growing plants in metal metalloid contaminated environments are discussed Phytoremediation techniques for the remediation of metals metalloids are discussed [Plant Responses to Hypoxia](#) Elena

Loreti, Gustavo Striker, 2021-03-02 Molecular oxygen deficiency leads to altered cellular metabolism and can dramatically reduce crop productivity Nearly all crops are negatively affected by a lack of oxygen hypoxia due to adverse environmental conditions such as excessive rain and soil waterlogging Extensive efforts to fully understand how plants sense oxygen deficiency and their ability to respond using different strategies are crucial to increase hypoxia tolerance Progress in our understanding has been significant in recent years This topic certainly deserves more attention from the academic community therefore we have compiled a series of articles reflecting the advancements made thus far **Environmental Pollution and Plant Responses** Shashi Bhushan Agrawal, Madhoolika Agrawal, 2023-01-30 Comprehensive and global in scope Environmental Pollution and Plant Responses provides an analysis of the research on the factors contributing to the deteriorating environmental quality and its effect on plant performance The issues include environmental pollution and global climate change response patterns of plants at different levels mechanisms of interaction tolerance strategies and future research prospects The author evaluates trends and gives management strategies for abating the problem This volume highlights the complexities of environmental problems and the affect of pollution on every level of the ecosystem *Protein Quality Controlling Systems in Plant Responses to Environmental Stresses* Minghui Lu, Yule Liu, Jie Zhou, Hanjo A Hellmann, Wei Wang, Sophia Stone, 2018-08-29 Environmental stress factors negatively affect plant growth by inducing proteins dysfunction As coping strategies plant have developed a comprehensive protein quality controlling system PQCS to keep proteins homeostasis In this research topic of Protein Quality Controlling Systems in Plant Responses to Environmental Stresses some latest researches and opinions in this field including heat shock proteins HSPs unfolded protein response UPR ubiquitin proteasome system UPS and autophagy were reported aiming to provide novel insights for increasing crop production under environmental challenges Holt Biology Rob DeSalle, Holt Rinehart and Winston, 2008 Holt Biology Student Edition 2008 **Regulation of Proteolysis and Proteome Composition in Plant Response to Environmental Stress** Mateusz Labudda, Zhiping Deng, Shaojun Dai, Ling Li, 2022-12-06 **Plant Responses to the Environment** Peter M. Gresshoff, 1993-07-23 Plant Responses to the Environment covers the fundamental mechanisms of plant responses to biotic and abiotic environmental stimuli By combining established disciplines like physiology and genetics with new approaches stemming from molecular biology and biophysics a new synthesis is achieved For example this book deals with the effects of microgravity on plant development and it provides an extensive analysis of plant perception and response to low oxygen and high ozone New techniques such as those used for gene transfer using the biolistic gene gun approach in soybeans are described Other topics considered include systemic acquired resistance SAR in plants and recent advances in understanding how legume roots perceive bacterial lipooligosaccharide signals A glossary subject index and author index are also provided Plant Responses to the Environment will be a valuable reference for plant physiologists ecophysiologists agronomists plant molecular biologists experimental botanists and other researchers interested in the topic Ethylene: A Key Regulatory

Molecule in Plants Nafees A. Khan, M. Iqbal R. Khan, Antonio Ferrante, Péter Poór, 2017-12-21 Ethylene is a simple gaseous phytohormone with multiple roles in regulation of metabolism at cellular molecular and whole plant level It influences performance of plants under optimal and stressful environments by interacting with other signaling molecules Understanding the ethylene biosynthesis and action through the plant's life can contribute to improve the knowledge of plant functionality and use of this plant hormone may drive adaptation and defense of plants from the adverse environmental conditions The action of ethylene depends on its concentration in cell and the sensitivity of plants to the hormone In recent years research on ethylene has been focused due to its dual action on the regulation of plant processes at physiological and molecular level The involvement of ethylene in the regulation of transcription needs to be widely explored involving the interaction with other key molecular regulators The aim of the current research topic was to explore and update our understanding on its regulatory role in plant developmental mechanisms at cellular or whole plant level under optimal and changing environmental conditions The present edited volume includes original research papers and review articles describing ethylene's regulatory role in plant development during plant ontogeny and also explains how it interacts with biotic and abiotic stress factors This comprehensive collection of researches provide evidence that ethylene is essential in different physiological processes and does not always work alone but in coordinated manner with other plant hormones This research topic is also a source of tips for further works that should be addressed for the biology and molecular effects on plants

Plants' Responses to Novel Environmental Pressures Alessio Fini, Massimiliano Tattini, Raquel Esteban, 2018-02-01 Plants have been exposed to multiple environmental stressors on long term seasonal and short term daily basis since their appearance on land However the frequency and the intensity of stress events have increased much during the last three decades because of climate change Plants have developed however a multiplicity of modular and highly integrated strategies to cope with challenges imposed by novel usually harsher environments These strategies include migration acclimation and adaptation Twelve articles in this research topic exactly focus on the relative significance of these response mechanisms for the successful acclimation of plants to a wide range of novel environmental pressures Four articles additionally explore how plants respond to severe stress conditions resulting from the concurrent action of multiple stressors Ten articles mostly examine how morpho anatomical physiological and biochemical related traits integrate when plants suffer from novel threats such as solid gaseous and electromagnetic pollutants Suitable physiological indicators for developing conservation strategies are described in the last two works This research topic highlights that bottom up as well as top down approaches will be necessary to develop in near future in the study of plants responses to environmental pressures *Induced plant responses to microbes and insects* Corné M. J. Pieterse, Marcel Dicke, Saskia C. M. Van Wees, Erik H. Poelman, 2014-04-14 Plants are members of complex communities and interact both with antagonists and beneficial organisms An important question in plant defense signaling research is how plants integrate signals induced by pathogens insect herbivores and beneficial microbes

into the most appropriate adaptive response Molecular and genomic tools are now being used to uncover the complexity of the induced defense signaling networks that have evolved during the arms races between plants and the other organisms with which they intimately interact To understand the functioning of the complex defense signaling network in nature molecular biologists and ecologists have joined forces to place molecular mechanisms of induced plant defenses in an ecological perspective In this Research Topic we aim to provide an on line open access snapshot of the current state of the art of the field of induced plant responses to microbes and insects with a special focus on the translation of molecular mechanisms to ecology and vice versa Plant responses to flooding Pierdomenico Perata,Rens Voesenek,Rashmi Sasidharan,Chiara Pucciariello,2015-01-05 Light and Plant Responses T.
