

Towards sustainable management of land and soil

Europe's land and soil face a number of pressures, including urban expansion, contamination from agriculture and industry, soil sealing, landscape fragmentation, low crop diversity, soil erosion and extreme weather events linked to climate change.

Greater cities with cleaner energy and transport systems, a green infrastructure connecting green areas, less intensive sustainable agricultural practices can help make Europe's land use more sustainable and soils healthier.

General Technical Report PNW-GTR ,1995 *Forest Policies and Social Change in England* Sylvie Nail,2008-05-08 Forestry has been witness to some dramatic changes in recent years with several Western countries now moving away from the traditional model of regarding forests merely as sources of wood Rather these countries are increasingly recognizing their forests as multi purpose resources with roles which go far beyond simple economics In this innovative book Sylvie Nail uses England as a case study to explore the relationships between forests society and public perceptions raising important questions about forest policy and management both now and in the future Adopting a sociological approach to forest policy and management the book discusses the current validity of the two principles underlying forestry since the Middle Ages first that forestry should only exist when no better use of the land can be made and second that forestry itself should be profitable The author stresses how values and perceptions shape policies and conversely how policies can modify perceptions and also how policies can fail if they do not take perceptions into account She concludes that many of the issues facing English forestry in the 21st century from leisure health and amenity provision through education and rural as well as urban regeneration to biodiversity conservation go well beyond both national borders and the scope of forestry Indeed forestry in the 21st century seems to be less about planting and managing trees than about being a vector and a mirror of social change This novel synthesis provides a valuable resource for advanced students and researchers from all areas of natural resource studies including those interested in social history socio economics cultural geography and environmental psychology as well

Agricultural Sustainability and Environmental Change at Ancient Gordion John M. Marston, 2017-08-21 This book publishes the results of 220 botanical samples from the 1993 2002 Gordion excavations directed by Mary Voigt Together with Naomi Miller's 2010 volume Gordion Special Studies 5 this book completes the publication of botanical samples from Voigt's excavations The book aims to reconstruct agricultural decision making using archaeological and paleoenvironmental data from Gordion to describe environmental and agricultural changes at the site John M Marston argues that different political and economic systems implemented over time at Gordion resulted in patterns of agricultural decision making that were well adapted to the social setting of farmers in each period but that these practices had divergent environmental impacts with some regimes sponsoring sustainable agricultural practices and others leading to significant environmental change The implications of this book are twofold Gordion will now be one of the best published agricultural datasets from the entire Near East and thus serve as a valuable comparable dataset for regional synthesis of agricultural and environmental change and the methods the author developed to reconstruct agricultural change at Gordion serves as tools to engage questions about

the relationship between social and environmental change at sites worldwide Other books address similar themes but none in the Near East address these themes in diachronic perspective such as we have at Gordion University Museum Monograph
