Artificial

Intelligence, Management and Trust Mariusz Sołtysik, Magda Gawłowska, Bartłomiej Snieżyński, Artur Gunia, 2023-09-01

The main challenge related to the development of artificial intelligence AI is to establish harmonious human AI relations necessary for the proper use of its potential AI will eventually transform many businesses and industries its pace of development is influenced by the lack of trust on the part of society AI autonomous decision making is still in its infancy but use cases are evolving at an ever faster pace Over time AI will be responsible for making more decisions and those decisions will be of greater importance The monograph aims to comprehensively describe AI technology in three aspects organizational psychological and technological in the context of the increasingly bold use of this technology in management Recognizing the differences between trust in people and AI agents and identifying the key psychological factors that determine the development of trust in AI is crucial for the development of modern Industry 4.0 organizations So far little is known about trust in human AI relationships and almost nothing about the psychological mechanisms involved The monograph will contribute to a better understanding of how trust is built between people and AI agents what makes AI agents trustworthy and how their morality is assessed It will therefore be of interest to researchers academics practitioners and advanced students with an interest in trust research management of technology and innovation and organizational management
