

Kinetic Molecular Theory

I. MOLECULES IN MOTION:

A. Kinetic Molecular Theory (KMT) = the idea that particles of matter are always in motion and that this motion has consequences.

- 1) theory developed in the late 19th century to account for the behavior of the atoms and molecules that make up matter
- 2) based on the idea that particles in all forms of matter are always in motion and that this motion has consequences
- 3) can be used to explain the properties of solids, liquids, and gases in terms of the energy of particles and the forces that act between them

- 3 assumptions of KMT:

1. All matter (solid, liquid, gas) is made of particles (atoms, ions, molecules)

2. Particles are in constant motion (electrons move)

- Particles of a GAS travel in completely *random* motion
- Particles of a LIQUID appear to vibrate around *moving* points
- Particles of a SOLID appear to vibrate around *fixed* points

Chemistry John Olmsted,Greg Williams,Robert C. Burk,2020 Chemistry 4th Edition is an introductory general chemistry text designed specifically with Canadian professors and students in mind A reorganized Table of Contents and inclusion of SI units IUPAC standards and Canadian content designed to engage and motivate readers and distinguish this text from other offerings It more accurately reflects the curriculum of most Canadian institutions Chemistry is sufficiently rigorous while engaging and retaining student interest through its accessible language and clear problem solving program without an excess of material and redundancy

Chemistry James N. Spencer,George M. Bodner,Lyman H. Rickard,2010-12-28 Chemistry Structure and Dynamics 5th Edition emphasises deep understanding rather than comprehensive coverage along with a focus on the development of inquiry and reasoning skills While most mainstream General Chemistry texts offer a breadth of content coverage the Spencer author team in contrast focuses on depth and student preparation for future studies The fifth edition is revised in keeping with our commitment to the chemical education community and specifically the POGIL Process Oriented Guided Inquiry Learning Project This text reflects two core principles first that the concepts that are covered are fundamental building blocks for understanding chemistry and second that the concepts should be perceived by the students as being directly applicable to their interests and careers The authors further provide this core coverage using 1 of 3 models data driven chemical theories and student understanding which allows for a more concrete foundation on which students build conceptual understanding
