Ballantyne, 2015-05-20 Imagine that everything you know is wrong In Cairo after uncovering evidence he believes will alter humanity's perception of its own history an eminent university professor is viciously murdered In another part of the Egyptian capital a determined police inspector will stop at nothing to find the murderer In Toronto one of the world's leading ancient astronaut proponents receives a startling message to decode a mysterious set of coordinates In another part of Ontario a young self-employed wrought iron designer is convinced he is somehow involved And in the sky someone is watching Thus begins Robert L. Ballantyne's debut novel From the streets of Toronto to a secretive Washington book shop from the heart of Cairo to the peaks of the great pyramids *Pharaohs of the Sky* lures you into a world where nothing is as it seems and where clandestine operatives conspire to hide the truth In this international mystery fact remains elusive by design and fate alike yet all revolves around the answer to one question Are we really alone It's time to question everything we think we know

Star Ark Rachel Armstrong, 2016-11-13 As space ventures have become more numerous leading scientists and theorists have offered ways of building a living habitat in a hostile environment taking an ecosystems view of space colonization The contributors to this volume take a radical multi-disciplinary view of the challenge of human space colonization through the ongoing project Persephone This book fundamentally challenges prevalent ideas about sustainability and proposes a new approach to resource austerity and conservation and providing truly sustainable approaches that are life-promoting Readers will learn the details of the plans for Persephone a real project that is part of the company Icarus Interstellar's plans for the design and engineering of a living interior on a worldship to be constructed in Earth's orbit within 100 years Although the timeframe itself is only an estimate since it is contingent on many significant developments including funding and technological advances the industry consensus is that within 100 years we will see manned space exploration beyond our

solar system This notion is shared by organizations such as the Initiative for Interstellar Studies and the DARPA funded 100 year starship project This book specifically develops the principles for the construction of a living habitat within a worldship a multi generational starship that contains its own world that supports colonists as it travels across great distances between stars at a speed much slower than light Far from being a sterile industrial setup such as the ISS or even being a bucolic suburbia as proposed by Gerard O Neill in the 1970s this worldship will provide the pre conditions for sustaining life beyond Earth s environment which may also lead to the evolution of non terrestrial ecologies Drawing on the principles of ecopoiesis and insights offered by the Biosphere 2 experiment that demonstrated what we have to learn about ecosystem construction this book proposes first designing the soils of such a space It should then be possible to set up the conditions that a first generation of colonists may experience in leaving our solar system to find new worlds to settle perhaps in spreading life throughout the universe Although the book takes a unique view of ecology and sustainability within the setting of a traveling starship it is equally concerned with the human experience on artificial worlds Chapters come from a range of multi disciplinary thinkers who shed light on the brave new future ahead from different angles
