DNA and Body Evidence Brian Innes, Jane Singer, 2016-06-11 An introduction to DNA fingerprinting and forensic evidence features photographs graphs sidebars of information actual case studies and key facts **Reference Manual on Scientific Evidence** ,1994 *Recovery, Analysis, and Identification of Commingled Human Remains* Bradley J. Adams, John E. Byrd, 2008-02-23 Mass fatality events can result in the intermixing or commingling of human remains Commingling of human remains presents an added challenge to all phases of the forensic process As the number of individuals increases so does the complexity of the forensic investigation and the skills needed for case resolution In *Recovery Analysis and Identification of Commingled Human Remains* top professionals illustrate successful techniques for sorting and determining the number of individuals the role of DNA ethical considerations and data management Instrumental to the forensic community *Recovery Analysis and Identification of Commingled Human Remains* provides case examples and an in depth review of experiences methods and research related to commingling Fostering Understanding of Complex Systems in Biology Education Orit Ben Zvi Assaraf, Marie-Christine P. J. Knippels, 2022-05-25 This book synthesizes a wealth of international research on the critical topic of fostering understanding of complex systems in biology education Complex systems are prevalent in many scientific fields and at all scales from the micro scale of a single cell or molecule to complex systems at the macro scale such as ecosystems Understanding the complexity of natural systems can be extremely challenging though crucial for an adequate understanding of what they are and how they work The term systems thinking has become synonymous with developing a coherent understanding of complex biological processes and phenomena For researchers and educators alike understanding how students systems thinking develops is an essential prerequisite to develop and maintain pedagogical scaffolding that facilitates students ability to fully understand the system s complexity To that end this book provides researchers and teachers with key insights from the current research community on how to support learners systems thinking in secondary and higher education Each chapter in the book elaborates on different theoretical and methodological frameworks pertaining to complexity in biology education and a variety of biological topics are included from genetics photosynthesis and the carbon cycle to ecology and climate change Specific attention is paid to design elements of computer based learning environments to understand complexity in biology education **Where are you? Self- and body part localization using virtual reality setups** Albert van der Veer , 2019-09-19 This volume presents a line of original experimental studies on the bodily self investigating where people locate themselves in their bodies and how accurate they are at localizing their body parts So far it was not well known whether people locate themselves in one or more specific regions of their bodies On the other hand some systematic distortions in indicating bodily locations were already documented In the present studies participants were therefore asked to indicate their self locations as well as the locations of several of their body parts using a self directed first person perspective pointing paradigm in various virtual reality VR setups different head mounted displays and a large screen

immersive display Overall participants were found to locate themselves mainly in the upper face and the upper torso However striking differences in self localization were found when testing in different VR setups Upon further investigation these differences were found to be foremost due to inaccuracies in body part localization When taking these inaccuracies into account differences between setups and also with self localization outside of VR largely disappear Another striking finding was that providing participants in between pointing phases with information about their bodies in the form of a real time animated self avatar did not make them more accurate at locating their own body parts While manipulating their viewpoint to chest height of their self avatar did shift the afterwards indicated locations of their own body parts upwards towards where they were seen on the avatar Potential explanations for the various new findings also from tasks outside of VR are discussed Taken together this volume suggests a differential involvement of multi sensory information processing in experienced self location within the body and the ability to locate body parts Self localization seems to be less flexible possibly because it is strongly grounded in the bodily senses while body part localization appears more adaptable to the manipulation of sensory stimuli at least in the visual modality
