Digital (R)Evolution in Radiology Walter Hruby, 2013-06-29. Three decades have passed since my first personal experiences, influences, and contacts with computer applications in the field of medicine. These experiences were influenced by diverse presentations, publications, and seminars concerning various applications of information technology as early as in

1970 Univac International Executive Centre Rome The first clinical proposals and discussions during the first World Congress of Intensive Care Medicine London 1974 strongly impressed me since they demonstrated that the future of medicine would be changed rapidly by the use of computer technology In 1975 when I started my radiology residency my clinical and academic interests were focused on two major topics i interventional radiology and the clinical responsibility of the radiologist for the patient and ii the improvement of radiological services for both the clinician and the patient through the use of digital technology These two topics firstly interventional radiology and secondly computer technology along with all digital techniques developed in respect to examinations and modalities have been the basis for my personal evolution of medicine especially of digital radiology
