Atmosphere Ocean Dynamics Gill:

Atmosphere—Ocean Dynamics Adrian E. Gill, 2016-06-03 Atmosphere Ocean Dynamics deals with a systematic and unified approach to the dynamics of the ocean and atmosphere The book reviews the relationship of the ocean atmosphere and how this system functions The text explains this system through radiative equilibrium models the book also considers the greenhouse effect the effects of convection and of horizontal gradients and the variability in radiative driving of the earth Equations in the book show the properties of a material element mass conservation the balance of scalar quantity such as salinity and the mathematical behavior of the ocean and atmosphere The book also addresses how the ocean atmosphere system tends to adjust to equilibrium both in the absence and presence of driving forces such as gravity The text also explains the effect of the earth's rotation on the system as well as the application of forced motions such as that produced by wind or temperature changes The book explains tropical dynamics and the effects of variation of the Coriolis parameter with latitude The text will be appreciated by meteorologists environmentalists students studying hydrology and people working in general earth sciences

Atmosphere-Ocean Dynamics Adrian E. Gill, 1982-12-12 A systematic unifying approach to the dynamics of the ocean and atmosphere is given in this book with emphasis on the larger scale motions from a few kilometers to global scale The foundations of the subject the equations of state and dynamical equations are covered in some detail so that students with training in mathematics should find it a self contained text Knowledge of fluid mechanics is helpful but not essential Simple mathematical models are used to demonstrate the fundamental dynamical principles with plentiful illustrations from field and laboratory

Atmospheric Circulation Dynamics and Circulation Models Masaki Satoh, 2004-05-03 This book describes the methods used to construct general circulation models GCMs of the atmosphere and how such models perform in applications relating to the real climate and environmental systems Part 1 summarizes the physical processes involved Part 2 covers atmospheric structures Part 3 outlines basic steps for constructing GCMs Includes an appendix with basic data and mathematical formulae to enable readers to construct GCMs for themselves

Atmosphere, Ocean and Climate Dynamics John Marshall, R. Alan Plumb, 2007-12-19 For advanced undergraduate and beginning graduate students in atmospheric oceanic and climate science Atmosphere Ocean and Climate Dynamics is an introductory textbook on the circulations of the atmosphere and ocean and their interaction with an emphasis on global scales It will give students a good grasp of what the atmosphere and oceans look like on the large scale and why they look that way The role of the oceans in climate and paleoclimate is also discussed The combination of observations theory and accompanying illustrative laboratory experiments sets this text apart by making it accessible to students with no prior training in meteorology or oceanography Written at a mathematical level that is appealing for undergraduates and beginning graduate students Provides a useful educational tool through a combination of observations and laboratory demonstrations which can be viewed over the web Contains instructions on how to reproduce the simple but informative laboratory experiments Includes copious problems with sample answers to help students learn the material
