**Gum Printing** Christina Anderson, 2016-06-17 Gum Printing A Step by Step Manual Highlighting Artists and Their Creative Practice is a two part book on gum bichromate written by the medium's leading expert Christina Z Anderson. Section One provides a step by step description of the gum printing process. From setting up the dimroom no darkroom required to evaluating finished prints it walks the reader through everything that is needed to establish a firm gum practice with the simplest of setups at home. Section Two showcases contemporary artists' works illustrating the myriad ways gum is conceptualized and practiced today. The works in these pages range from monochrome to colorful and from subtle to bold representing a variety of genres including still lifes, portraits, nudes, landscapes, urbanscapes and more. Featuring over 80 artists and 400 full color images Gum Printing is the most complete overview of this dynamic and expressive medium that has yet appeared in print. Key topics covered include: The history of gum, Simple digital negatives for gum, platinum and cyanotype, Preparing supplies, Making monochrome, duotone, tricolor and quadcolor gum prints, Printing gum over cyanotype, Printing gum over platinum, Troubleshooting gum, Advice on developing a creative practice. Lithium-Ion Cells Yuri Koshtyal, Alexander Rummyantsev, 2024-12-24 A large quantity of articles and books have been published on the designated topics. However, most of the literary sources describe the results of scientific articles on the synthesis and study of perspective materials, reveal circuit and design solutions for constructing control systems and manufacturing batteries and are educational materials. At the same time, a small part of the published sources includes the following descriptions of materials produced industrially and used in the LIC manufacturing process: demonstrations of the industrially produced LIC energy and power parameters, analysis of the characteristics of manufactured miniature lithium ion cells, solid state LICs, lithium metal cells and all solid state cells as well as others. Considering the popularity of the discussed topics, one can hope to find detailed information on the Internet. Indeed, modern search engines make it possible to locate a sufficiently large number of relevant documents. However, while conducting such research, we encountered the following challenges: the data are somewhat fragmented and their systematization and structuring are required; search results do not always meet search queries. For instance, data that were relevant to the topic were found but they did not match the query as accumulated data grow, the search time for new information extends, the choice of search engine and location, different countries affect search results, the data are not indexed in search engines although the correct keywords and website were requested, the information disappears due to website updates and the found data require additional processing. For example, many presentations show changes in the shape of the discharge curves depending on the discharge current strength. In addition, however, Ragone plots are necessary for a correct comparison and therefore the mathematical processing of presented results is required. Thus, this book was written to systematize and structure information on industrially produced materials for LIC manufacturing and industrially produced and promising LICs and lithium metal rechargeable cells for various applications.
