Million Dollar Data: Building Confidence - Vol.1 Stephen DeMeo, 2020-07-31 Global warming our current and greatest challenge is without precedent Among the many consequences that are impacting our society one unanticipated concern involves scientific truth When the President of the United States and others in his administration declare that global warming is fake science it calls into question what real science is and what real school science should be I will argue that real science is quality science one that is based on the rigorous collection of reliable and valid data To collect quality data requires bending over backwards to get things right and this is exactly what makes science so special Truth is made when scientists go this extra yard and devise controlled experiments collect large data sets confirm the data and rationally analyze their results Making scientific truth sounds difficult to do in the science laboratory but in reality there are many straightforward ways that truth can be constructed In the first of two volumes I discuss twelve such ways I call them Confidence Indicators that can allow students to strongly believe in their data and their subsequent results Many of these methods are intuitive and can be used by young students on the late elementary level all the way up to those taking introductory college science courses As in life science is not without doubt In the second volume I introduce the concept of scientific uncertainty and the indicators used to calculate its magnitude I will show that science is about connecting confidence with uncertainty in a specific manner what I refer to as the Confidence Uncertainty Continuum expression This important relationship epitomizes the scientific enterprise as a search for probabilistic rather than absolute truth This two volume set will contain a variety of ways that data quality can be instituted into a science curriculum To support its use many of the examples that I will present involve science teachers as well as student work and feedback from different grade levels and in different scientific disciplines Specific chapters will be devoted to reviewing the academic literature on data quality as well as describing my own personal research on this important but often neglected topic

Interdisciplinary Teaching About Earth and the Environment for a Sustainable Future David C. Gosselin, Anne E. Egger, J. John Taber, 2018-12-13 Interdisciplinary Teaching about the Earth and Environment for a Sustainable Future presents the outcomes of the InTeGrate project a community effort funded by the National Science Foundation to improve Earth literacy and build a workforce prepared to tackle environmental and resource issues The InTeGrate community is built around the shared goal of supporting

interdisciplinary learning about Earth across the undergraduate curriculum focusing on the grand challenges facing society and the important role that the geosciences play in addressing these grand challenges The chapters in this book explicitly illustrate the intimate relationship between geoscience and sustainability that is often opaque to students The authors of these chapters are faculty members administrators program directors and researchers from institutions across the country who have collectively envisioned implemented and evaluated effective change in their classrooms programs institutions and beyond This book provides guidance to anyone interested in implementing change on scales ranging from a single course to an entire program by infusing sustainability across the curriculum broadening access to Earth and environmental sciences and assessing the impacts of those changes

The Globalization of Science Curricula Oliver Stacey, Giulia De Lazzari, Hilary Grayson, Hazel Griffin, Emily Jones, Amanda Taylor, David Thomas, 2018-02-12

Globalization is a powerful force with far reaching impacts on education and education policy The growth of large scale international surveys of student achievement and the increasing role played by intergovernmental agencies in education means that the influence that globalization exerts on education is likely to increase even further in the future This open access book provides a significant and timely investigation into the impacts that globalization has exerted on science curricula in a diverse range of countries using extensive data sets collected by the IEA between 1995 and 2015 Using a combination of quantitative and qualitative methods this book considers the extent to which there have been changes to the intended and implemented science curricula in different countries over the last 20 years Consideration is then given as to whether science curricula are becoming increasingly similar across countries over time Finally the issue of whether the basis of an international core curriculum can be identified is addressed Readers will gain a unique insight into the extent to which globalization and large scale international assessments have influenced science curricula in the last 20 years within both the primary and secondary phases

People's desire to understand the environments in which they live is a natural one People spend most of their time in spaces and structures designed built and managed by humans and it is estimated that people in developed countries now spend 90 percent of their lives indoors As people move from homes to workplaces traveling in cars and on transit systems microorganisms are continually with and around them The human associated microbes that are shed along with the human behaviors that affect their transport and removal make significant contributions to the diversity of the indoor microbiome The characteristics of healthy indoor environments cannot yet be defined nor do microbial clinical and building researchers yet understand how to modify features

of indoor environments such as building ventilation systems and the chemistry of building materials in ways that would have predictable impacts on microbial communities to promote health and prevent disease The factors that affect the environments within buildings the ways in which building characteristics influence the composition and function of indoor microbial communities and the ways in which these microbial communities relate to human health and well being are extraordinarily complex and can be explored only as a dynamic interconnected ecosystem by engaging the fields of microbial biology and ecology chemistry building science and human physiology This report reviews what is known about the intersection of these disciplines and how new tools may facilitate advances in understanding the ecosystem of built environments indoor microbiomes and effects on human health and well being It offers a research agenda to generate the information needed so that stakeholders with an interest in understanding the impacts of built environments will be able to make more informed decisions

Our Dynamic Earth: A Primer Matthew R. Bennett, 2022-01-18 Students taking undergraduate degrees in geography ecology earth science and environmental science frequently take an introductory unit in Physical Geography Some will have not done any geography since their early teens while others have more recent knowledge This range of backgrounds can be challenging for both the instructor and the student this primer aims to help A primer is a readable introduction to a subject more technical than a piece of popular science but less detailed than a specialist textbook It aims to give the reader a platform in a subject with which they may be unfamiliar so that they can proceed simultaneously or sequentially to more advanced texts and information Ideally the primer should have something for those without any knowledge while also challenge and entertaining those who do Not quite bedtime reading but a step in that direction Our Dynamic Earth introduces students to the Earth s origins to plate tectonics atmospheric and oceanographic circulation as well as to a range of Earth surface processes Idea to get you started in your studies [Schooling Across the Globe](#) William H. Fundamentals of Global Air Transport Geography George Arbuckle, 2025-04-14 The commercial air transport industry can be broadly split into three component parts: airlines, airports and aircraft. Each of these components is shaped by geography insofar as each is influenced by places, landscapes, environments, people and their various interactions. Conversely, air transport plays a large role in shaping the various themes of geography and the position of our physical, human and environmental world. It connects people, cultures and businesses across every continent and generates economic growth, allows international trade to occur and develops tourism. It can also be involved in creating negative outputs such as emissions, noise and loss of biodiversity, which can have a large impact on the planet and quality of life. A lack of air transport links can also have a significantly negative impact on world regions in terms of economic and cultural development. In short, air transport and geography are inextricably linked. *Fundamentals of Global Air Transport Geography* details the geography of the global commercial air transport industry. The book aims to provide an understanding of these key areas at an introductory level in order to be accessible to students and non-technical airport/airline management. A key theme throughout the book will not only be how geographical issues have influenced air transport but also how air transport continues to influence geography. Each chapter boasts a range of features aimed at enhancing the reader's understanding, including learning objectives, discussion questions and case studies, and lecturers can find supporting resources including PowerPoint slides and teaching notes online.

Geographers of the Ancient Greek World: Volume 1 D. Graham J. Shipley, 2024-04-18 Ancient Greek geographical writing is represented not just by the surviving works of the well-known authors Strabo, Pausanias and Ptolemy but also by many other texts dating from the Archaic to the Late Antique period. Most of these texts are, however, hard for non-specialists to find and many have never been translated into English. This volume, the work of an international team of experts, presents the most important thirty-six texts in new accurate translations. In addition, there are explanatory notes and authoritative introductions to each text which offer a new understanding of the individual writings and demonstrate their importance, no longer marginal but in the mainstream of Greek literature and science. The book includes twenty-eight newly drawn maps, images of the medieval manuscripts in which most of these works survive and a full Introduction providing a comprehensive survey of the field of Greek and Roman geography.
