[Multicopter Design and Control](#) Quan Quan, 2017-06-23 This book is the first textbook specially on multicopter systems in the world. It provides a comprehensive overview of multicopter systems rather than focusing on a single method or technique. The fifteen chapters are divided into five parts covering the topics of multicopter design, modeling, state estimation, control, and decision making. It differs from other books in the field in three major respects: it is basic and practical, offering self-contained content and presenting hands-on methods; it is comprehensive and systematic, and it is timely. It is also closely related to the autopilot that users often employ today and provides insights into the code employed. As such, it offers a valuable resource for anyone interested in multicopters, including students, teachers, researchers, and engineers. This introductory text is a welcome addition to the literature on multicopter design and control, on which the author is an acknowledged authority. The book is directed to advanced undergraduate and beginning graduate students in aeronautical and control or electrical engineering, as well as to multicopter designers and hobbyists. Professor W. Murray Wonham, University of Toronto. This is the single best introduction to multicopter control. Clear, comprehensive, and progressing from basic principles to advanced techniques, it's a must-read for anyone hoping to learn how to design flying robots. Chris Anderson, 3D Robotics CEO. [Islamic State](#) Yorck Beese, 2024-05-27 The film of the so-called Islamic State is part of the still relatively opaque history of radical Sunni Islamist video propaganda, a field in which it is simultaneously its strongest exponent. Through its imports of aesthetics in the age of digitalization and the concurrent de-professionalization of film, this violent propaganda film has interestingly drawn attention for its seeming likeness to Hollywood film, an odd comparison that the Islamic State itself

opposes through its own filmic antagonisms to commercial cinema In an intermittent attempt at attacking cinematic illusionism it has made increasing use of cinematic devices in order to communicate its violent and anti humanist ideology and has thereby entered a state of filmic self contradiction This book analyzes and uncovers the mechanisms and dynamics of ideological communication in the Islamic State s videos through a combined historical and neoformalist approach making them predictable for future researchers
