Solid-Fluid Operations Subrata Kumar Majumder,2025-04-28 The text presents fundamental principles and analysis of the separation of particulate matter Analysis and reduction of air pollution involve a variety of technical disciplines The effective way to control air pollution is to prevent the release of pollutants at the source The treatment can involve intimately contacting the effluent gases with liquids or solids capable of selectively removing gaseous pollutants or in the case of particulate contaminants directing the effluent flow through a device in which the particles are captured on surfaces This book Introduces the principle of separation methods of particulate matter PM common control equipment of PM and collection or removal efficiency of the equipment Describes the concept of separation of particles by sieving screening the basic principles of screening equipment and the screen s effectiveness Present the fundamental theories of removing particulate and gaseous pollutants from effluent streams by pollution control operations such as gravitational gravity chambers and centrifugal deposition cyclone separator electrostatic precipitation filtration and wet scrubbing and covers fundamental principles of membrane separation membrane modules process design applications and governing equations of plate and frame filter press and rotary drum filter Deals with the basic understanding of reverse osmosis and its theoretical analysis by different total flux and capacity models and explains the basic understanding of adsorption onto the solid surface and their isotherm and kinetics Includes ancillary material such as numerical problems review questions multiple choice questions and exercises at the end of each chapter It is primarily written for senior undergraduates graduate students and academic researchers in chemical engineering mechanical engineering environmental engineering industrial engineering manufacturing engineering and chemistry *Bowker's Law Books and Serials in Print* ,1993 Exploring Fundamental Issues in Nuclear Physics Debades Bandyopadhyay,2012 This book will focus on recent advances in nuclear physics and bring together experimentalists and theorists Topics covered include neutron rich and superheavy nuclei supernova and r process nuclei deeply bound antikaon and antiproton nuclei nuclear symmetry energy and equation of state neutron stars FAIR and future Dubna research other related areas *Transitions □ History and Civics □ 7* Anuradha Sud, Transitions brings alive History and Civics for learners and transforms these subjects into an exciting journey The books strictly follow the guidelines of the Inter State Board for Anglo Indian Education and the ICSE Board The series fosters a sense of history in young learners by reconstructing the past and introduces young minds to people and events from the past It also makes students feel responsible towards their surroundings and fellow beings *Rapid Prototyping of Application Specific Signal Processors* Mark A. Richards,Anthony J. Gadiant,Geoffrey A. Frank,1997-02-28 Rapid Prototyping of Application Specific

Signal Processors presents leading edge research that focuses on design methodology infrastructure support and scalable architectures developed by the 150 million dollar DARPA United States Department of Defense RASSP Program The contributions to this edited work include an introductory overview chapter that explains the origin concepts and status of this effort The RASSP Program is a multi year DARPA Tri Service initiative intended to dramatically improve the process by which complex digital systems particularly embedded signal processors are designed manufactured upgraded and supported This program was originally driven by military applications for signal processing The requirements of military applications for real time signal processing are typically more demanding than those of commercial applications but the time gap between technology employed in advanced military prototypes and commercial products is narrowing rapidly The research on methodologies infrastructure and architectures presented in this book is applicable to commercial signal processing systems that are in design now or will be developed before the end of the decade Rapid Prototyping of Application Specific Signal Processors is a valuable reference for developers of embedded digital systems particularly systems engineers for signal processing systems such as digital TV biomedical image processing systems and telecommunications and for military contractors who are developing signal processing systems This book will also be of interest to managers who are charged with responsibility for creating and maintaining environments and infrastructures for developing large embedded digital systems The chief value for managers will be the defining of methods and processes that reduce development time and cost
