Sandeep Narayan Kundu,2022-01-03 This book highlights advanced applications of geospatial data analytics to address real world issues in urban society With a connected world we are generating spatial at unprecedented rates which can be harnessed for insightful analytics which define the way we analyze past events and define the future directions This book is an anthology of applications of spatial data and analytics performed on them for gaining insights which can be used for problem solving in an urban setting Each chapter is contributed by spatially aware data scientists in the making who present spatial perspectives drawn on spatial big data The book shall benefit mature researchers and student alike to discourse a variety of urban applications which display the use of machine learning algorithms on spatial big data for real world problem solving HM Government: Scotland Analysis: Science and Research Great Britain: Scotland Office,2013-11-11 This paper is the latest in the Scotland analysis series and explores how an integrated domestic environment for research in publicly

funded institutions supports the UK's including Scotland's excellent and thriving research base which is vital for innovation and economic success. An independent Scottish state would become responsible for deciding how much to spend on research activity and how to distribute research funding. In order to replace the 2012-13 level of Research Council expenditure in Scotland 307 million, the government of an independent Scottish state would have to spend 0.23 per cent of 2012 GDP on research or seek additional funding from elsewhere such as overseas businesses or charities. Businesses and research charities could however face additional administrative burdens created by divergences in regulatory regimes and tax jurisdictions meaning funding projects in both the continuing UK and an independent Scottish state could become more complex. UK national institutions would operate on behalf of the continuing UK as before but would have no power or obligation to act in or on behalf of an independent Scottish state. In the event of independence, the single strategic and highly integrated research framework would be likely to diverge as an independent Scottish state set and deliver its own research priorities. Research collaborations between the continuing UK and an independent Scottish state would be international collaborations associated with levels of risk not present in domestic collaborations. Research excellence is also supported by the ability of researchers and staff to move freely across the UK and elsewhere thereby supporting the flow of knowledge.
