Focus on Chronic Pain: Neuropathological Mechanism, Clinical Diagnosis and Treatment, Boris Krylov, Tao Song, Ma Ke, Yan Lu, Dong Huang, 2024-01-15. Pain is an unpleasant sensory and emotional experience and the most frequent cause for patients to seek medical care. Persistent chronic pain affects millions of people worldwide, causing low quality of health and emotional status as well as posing a significant social and economic burden. Chronic pain is the long-standing pain that is classified as different types, including chronic primary pain and secondary pain types caused by various diseases. The complexity of cause and symptom in chronic pain is associated with changes in different levels of nervous system, from molecular interaction, synaptic connection, cellular response, and neural circuits. The development of new treatments to manage chronic pain shall be based on the better understanding of the neuropathological mechanism underlying the symptom, the exploration of the methods of a better diagnosis, and the communication of clinical application standards and results.

Frailty- and Age-Associated Diseases: Possibilities For Intervention, Consuelo Borrás, Jose Vina, Cristina Mas Bagues, 2024-12-06. The average human lifespan has increased at a breath-taking rate in the last century. The major problem of gerontology and geriatrics today is to promote healthspan and happiness in the elderly population. A milestone in geriatrics was the definition of frailty as a geriatric syndrome with a defined phenotype. Understanding the molecular mechanisms of aging is of paramount importance to promote rational interventions to delay the onset of frailty and of age-associated diseases. The EU has shown that in 2020, 30% of the over 65 populations in Europe are disabled. This leads to huge costs in

terms of individual wellbeing as well as in social and economic burden We have calculated that in Spain alone the cost of disability is 18 000 million Euros per year Any effort to understand the process of healthy aging and to promote interventions to delay frailty and hence disability is of paramount importance The goal of this Research Topic is to gather cutting edge research work and review knowledge on the basic mechanisms of aging with a clear aim to translate them into actions to promote healthy aging It has been known for the last twenty years that four simple lifestyle changes i e quit smoking exercising taking five helpings of fruits or vegetables per day and drinking one glass of wine daily can prolong lifespan by as much as fourteen years The goal of this Topic is to put knowledge together in order to foster interventions to promote happy and healthy years in the life of the elderly population
