

Fynbos, derived from Dutch, refers to the “fine-leaved” vegetation that grows in the mountainous areas of the Cape Floristic Region (CFR), an botanists call the unique area of floral diversity at the southern tip of Africa. The soils here are rocky and nutrient poor, the scrub prone to going up in flames. Yet adversity has fostered one of the richest concentrations of plant diversity in the world: Some 9,000 native species live in the CFR—many of them evolved here and live nowhere else. Löfthachmeyer’s shovelful of fynbos came out of Table Mountain National Park, the monumental mass that towers over Cape Town. Sifting through samples, the photographer counted 60 separate species, including 45 types of plants just on the soil surface, along with some 200 seeds representing at least five of those species. Root masses held a host of crickets, and the sticky leaves of a carnivorous sundew plant—looking too pretty to be predatory—offered another feastful of insects to the tally.

A World In One Cubic Foot Portraits Of Biodiversity:

A World in One Cubic Foot David Liittschwager, 2012-11-21 Twelve inches by twelve inches by twelve inches the cubic foot is a relatively tiny unit of measure compared to the whole world With every step we disturb and move through cubic foot after cubic foot But behold the cubic foot in nature from coral reefs to cloud forests to tidal pools even in that finite space you can see the multitude of creatures that make up a vibrant ecosystem For *A World in One Cubic Foot* esteemed nature photographer David Liittschwager took a bright green metal cube measuring precisely one cubic foot and set it in various ecosystems around the world from Costa Rica to Central Park Working with local scientists he measured what moved through that small space in a period of twenty four hours He then photographed the cube's setting and the plant animal and insect life inside it anything visible to the naked eye The result is a stunning portrait of the amazing diversity that can be found in ecosystems around the globe Many organisms captured in Liittschwager's photographs have rarely if ever been presented in their full splendor to the general reader and the singular beauty of these images evocatively conveys the richness of life around us and the essential need for its conservation The breathtaking images are accompanied by equally engaging essays that speak to both the landscapes and the worlds contained within them from distinguished contributors such as Elizabeth Kolbert and Alan Huffman in addition to an introduction by E O Wilson After encountering this book you will never look at the tiniest sliver of your own backyard or neighborhood park the same way instead you will be stunned by the unexpected variety of species found in an area so small *A World in One Cubic Foot* puts the world accessibly in our hands and allows us to behold the magic of an ecosystem in miniature Liittschwager's awe inspiring photographs take us to places both familiar and exotic and instill new awareness of the life that abounds all around *From Assessing to Conserving Biodiversity* Elena Casetta, Jorge Marques da Silva, Davide Vecchi, 2019-06-17 This open access book features essays written by philosophers biologists ecologists and conservation scientists facing the current biodiversity crisis Despite increasing communication accelerating policy and management responses and notwithstanding improving ecosystem assessment and endangered species knowledge conserving biodiversity continues to be more a concern than an accomplished task Why is it so The overexploitation of natural resources by our species is a frequently recognised factor while the short term economic interests of governments and stakeholders typically clash with the burdens that implementing conservation actions imply But this is not the whole story This book develops a different perspective on the problem by exploring the conceptual challenges and practical defiance posed by conserving biodiversity namely on the one hand the difficulties in defining what biodiversity is and characterizing that thing to which the word biodiversity refers to on the other hand the reasons why assessing biodiversity and putting in place effective conservation actions is arduous *The Wardian Case* Luke Keogh, 2020-11-17 The story of a nineteenth century invention essentially a tiny greenhouse that allowed for the first time the movement of plants around the world feeding new agricultural industries the commercial nursery trade botanic and private gardens invasive

species imperialism and more Roses jasmine fuchsia chrysanthemums and rhododendrons bloom in gardens across the world and yet many of the most common varieties have roots in Asia How is this global flowering possible In 1829 surgeon and amateur naturalist Nathaniel Bagshaw Ward placed soil dried leaves and the pupa of a sphinx moth into a sealed glass bottle intending to observe the moth hatch But when a fern and meadow grass sprouted from the soil he accidentally discovered that plants enclosed in glass containers could survive for long periods without watering After four years of experimentation in his London home Ward created traveling glazed cases that would be able to transport plants around the world Following a test run from London to Sydney Ward was proven correct the Wardian case was born and the botanical makeup of the world's flora was forever changed In our technologically advanced and globalized contemporary world it is easy to forget that not long ago it was extremely difficult to transfer plants from place to place as they often died from mishandling cold weather and ocean salt spray In this first book on the Wardian case Luke Keogh leads us across centuries and seas to show that Ward's invention spurred a revolution in the movement of plants and that many of the repercussions of that revolution are still with us from new industries to invasive plant species From the early days of rubber banana tea and cinchona cultivation the last used in the production of the malaria drug quinine to the collecting of beautiful and exotic flora like orchids in the first great greenhouses of the United States Botanic Garden in Washington DC and England's Royal Botanic Gardens Kew the Wardian case transformed the world's plant communities fueled the commercial nursery trade and late nineteenth century imperialism and forever altered the global environment

Life Writing in the Posthuman Anthropocene Ina Batzke, Lea Espinoza Garrido, Linda M. Hess, 2022-01-01 Life Writing in the Posthuman Anthropocene is a timely collection of insightful contributions that negotiate how the genre of life writing traditionally tied to the human perspective and thus anthropocentric qua definition can provide adequate perspectives for an age of ecological disasters and global climate change The volume's eight chapters illustrate the aptness of life writing and life writing studies to critically reevaluate the role of the human vis vis non human others while remaining mindful of persisting inequalities between humans regarding who causes and who suffers damage in the Anthropocene age The authors in this collection not only expand the toolbox of life writing studies by engaging with critical insights from the fields of posthumanism and ecocriticism but in turn also enrich those fields by offering unique approaches to contemplate the responsibility of humans for as well as their relational existence in the posthuman Anthropocene

Global Soil Biodiversity Atlas European Commission. Joint Research Centre, 2016 The Atlas describes soil as habitat for the diversity of organisms that live under our feet At the same time it draws attention to the threats to soil biodiversity such as invasive species pollution intensive land use practices or climate change The Atlas provides current solutions for a

sustainable management of soils It was coordinated by the JRC and the Global Soil Biodiversity Initiative www.globalsoilbiodiversity.org with more than 70 contributing organisations and several hundred individual contributions It illustrates the diversity of soil organisms explains their geographical and temporal distribution the ecosystem functions and services provided by soil biota Most importantly it draws attention to the myriad of threats to soil biodiversity These include inappropriate land management practices e.g. deforestation land take for infrastructure development agricultural systems over grazing forest fires and poor water management both irrigation and drainage Other practices such as land conversion from grassland or forest to cropped land result in rapid loss of soil carbon which indirectly enhances global warming The Atlas shows that mismanaging soils could exacerbate the effects of climate change jeopardise agricultural production compromise the quality of ground water and worsen pollution It also proposes solutions to safeguard soil biodiversity through the development of policies that directly or indirectly target soil health leading to a more sustainable use **Back to Earth**
