Adaptive Management For Water Resources Project Planning:

Adaptive Management for Water Resources Project Planning National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Water Science and Technology Board, Committee to Assess the U.S. Army Corps of Engineers Methods of Analysis and Peer Review for Water Resources Project Planning, Panel on Adaptive Management for Resource Stewardship, 2004-09-26 This book reviews the Corps of Engineers experiences to date with the concept of adaptive management and provides advice on additional and more effective implementation of this planning approach The adaptive management concept itself is complex and evolving but might be summarized as learning while doing The book reviews literature on adaptive management and notes that a range of adaptive management practices present themselves for Corps projects It is noted that there is no cookbook approach to adaptive management and the book encourages the Corps of Engineers to continue to work with and learn from its applications of the concept To facilitate institutional learning and to ensure that experiences are being employed across the agency the book recommends that a Corps Center for Adaptive Management be established The book also notes that greater involvement from the administration and Congress will be essential to successful adaptive management applications as the Corps efforts in this area will benefit from clarified water resources management objectives the authority to manage adaptively and from resources necessary for programs such as stakeholder collaboration and post construction evaluations

Adaptive Management for Water Resources Project Planning, 2004 *Water Resources Planning for the Upper Mississippi River and Illinois Waterway* National Research Council, Transportation Research Board, Division on Earth and Life Studies, Water Science and Technology Board, Committee to Review the Corps of Engineers Restructured Upper Mississippi River-Illinois Waterway Draft Feasibility Study, 2005-11-18 The U S Army Corps of Engineers recently completed its feasibility study for the Upper Mississippi River Illinois Waterway which was one of the agency's longest and most complicated studies in its history The first two reports from this WSTB committee reviewed analytical aspects of the Corps feasibility study *Water Resources Planning for the Upper Mississippi River and Illinois Waterway* considers the broader issue of managing the multiple resources of the Upper Mississippi River and Illinois Waterway especially with regard to several recently issued NRC reports on Corps of Engineers planning procedures The report finds that a key issue regarding planning decisions on these river systems is the ambiguity related to several different pieces of legislation and acts that govern river management and thus recommends that the administration and Congress clarify the federal intent for managing this river and waterway system The report recommends an independent retrospective review of the experience with a federal inter agency Principals Group which was convened to provide guidance to the Corps study It is also recommended that the Corps strive to incorporate flexible adaptive management principles through its entire water planning program including operations of the lock and dam system *River Basins and Coastal Systems Planning Within the U.S. Army Corps of Engineers* National Research Council, Division on Earth and Life

Studies, Water Science and Technology Board, Ocean Studies Board, Committee to Assess the U.S. Army Corps of Engineers Methods of Analysis and Peer Review for Water Resources Project Planning, Panel on River Basin and Coastal Systems Planning, 2004-08-18 The U S Army Corps of Engineers the Corps has played a large and important role in shaping water resources systems in the United States since Congress first tasked it in 1824 to improve navigation on the Ohio and Mississippi Rivers Since then rivers have been modified for navigation and flood control harbors have been dredged for shipping and coastlines are routinely fortified against erosion and beach loss Recent decades have seen an overall decline in budgets for civil works project construction yet the range of objectives for water resources projects has broadened as society places more value on environmental and recreational benefits Thus the Corps portfolio of water resources projects has changed considerably There is a reduced emphasis on traditional construction projects and an increased focus on maintenance and reoperation of existing projects such as locks dams and levees and on environmental restoration projects An integrated approach to water resources planning at the scale of river basins and coastal systems is widely endorsed by the academic and engineering communities The Corps mission expertise and experience give it immense potential to alter the structure and functioning of the nation s waterways and coasts As might be expected in a large and complex organization answering to a range of public and private demands implementation of these new policies and objectives is neither consistent nor complete River Basins and Coastal Systems Planning within the U S Army Corps of Engineers recommends improvements in the Corps water resource project planning and review process This report compares economic and environmental benefits and costs over a range of time and space scales suggests multiple purpose formulation and evaluation methods and recommends integration of water development plans with other projects in the region *U.S. Army Corps of Engineers Water Resources Planning* National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Water Science and Technology Board, Committee to Assess the U.S. Army Corps of Engineers Methods of Analysis and Peer Review for Water Resources Project Planning, Coordinating Committee, 2004-09-19 From the Executive Summary There are some concerns that the current Corps planning and construction budget has not kept pace with expanding national water management needs for flood hazard management water transportation and other purposes At the same time others question the wisdom of and budgetary prospects for the continuation of a traditional water project construction program Debates about water use and funding priorities now extend to intense scrutiny of Corps of Engineers planning investment and project operations programs **Governing Integrated Water Resources Management** Oliver Fritsch, David Benson, 2020-01-23 Integrated Water Resources Management IWRM has become a global paradigm for the governance of surface coastal and groundwaters This Special Issue contains twelve articles related to the transfer of IWRM policy principles The articles explore three dimensions of transfer causes processes outcomes and offer a theoretically inspiring methodologically rich and geographically diverse engagement with IWRM policy transfer around the globe As such they can also productively inform a

future research agenda on the dimensional aspects of IWRM governance Regarding the causes the contributions apply criticise extend or revise existing approaches to policy transfer in a water governance context asking why countries adopt IWRM principles and what mechanisms are in place to understand the adoption of these principles in regional or national contexts When it comes to processes articles in this Special Issue unpack the process of policy transfer and implementation and explore how IWRM principles travel across borders levels and scales Finally this set of papers looks into the outcomes of IWRM policy transfer and asks what impact IWRM principles once implemented gave on domestic water governance water quality and water supply and how effective IWRM is at addressing critical water issues in specific countries *Proposed Cotterel Wind Power Project and Resource Management Plan* ,2006 [New Directions in Water Resources Planning for the U.S. Army Corps of Engineers](#) National Research Council,Division on Earth and Life Studies,Commission on Geosciences, Environment and Resources,Committee to Assess the U.S. Army Corps of Engineers Water Resources Project Planning Procedures,1999-04-29 The U S Army Corps of Engineers has long been one of the federal government s key agencies in planning the uses of the nation s waterways and water resources Though responsible for a range of water related programs the Corps s two traditional programs have been flood damage reduction and navigation enhancement The water resource needs of the nation however have for decades been shifting away from engineered control of watersheds toward restoration of ecosystem services and natural hydrologic variability In response to these shifting needs legislation was enacted in 1990 which initiated the Corps s involvement in ecological restoration which is now on par with the Corps s traditional flood damage reduction and navigation roles This book provides an analysis of the Corps s efforts in ecological restoration and provides broader recommendations on how the corps might streamline their planning process It also assesses the impacts of federal legislation on the Corps planning and projects and provides recommendations on how relevant federal policies might be altered in order to improve Corps planning Another important shift affecting the Corps has been federal cost sharing arrangements enacted in 1986 mandating greater financial participation in Corps water projects by local co sponsors The book describes how this has affected the Corps sponsor relationship and comments upon how each group must adjust to new planning and political realities *Review Procedures for Water Resources Project Planning* National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Water Science and Technology Board,Committee to Assess the U.S. Army Corps of Engineers Methods of Analysis and Peer Review for Water Resources Project Planning,Panel on Peer Review,2003-01-16 The U S Army Corps of Engineers through its civil works program can take pride in its contributions throughout our nation s history to the development of waterways infrastructure navigation flood damage reduction water resources development and protection and environmental restoration Many projects that have been pioneering in their concept and bold in their execution were made possible by the creativity and dedication of outstanding scientists engineers and builders The Corps has always had review processes for evaluation of its planning studies and projects with the focus

often being largely on the technical aspects In recent years however increased consideration of such factors as environmental impacts economic evaluations political pressures and new paradigms about flood control and management has engendered increased criticism and concern that some of the Corps studies may have led to conclusions recommendations and project decisions that are not adequately supported by the assumptions and analyses that were used The focus of the report is on review of Corps of Engineers studies with careful attention given to the need for independent external reviews by panels of well qualified and impartial experts for large complex and sensitive projects
