Unsaturated - solutions with solubility chart when the temperature would be enough to make a substance dissolve but at a greater amount of solute solubility **less solute dissolves than can** (ex. salt @ 20°C temp)

Saturated - solutions with solubility chart when the temperature-solubility relationship is at the line in other words a solution with solute has **reached** at the maximum possible amount.

Supersaturated - contains **more than the max. amount** of solute that can be dissolved at the temperature on the solubility chart this would mean the grams of solute would go above the line.
