1

Vasopressin is OUT

In an effort to streamline and simplify cardiac arrest algorithms, vasopressin has been removed. Epinephrine & vasopressin have equivalent outcomes.

2

Ultrasound for ETT confirmation

Ultrasound has been added as an additional method for confirming endotracheal tube placement.

3

If you can't shock, give epi ASAP

Non-shockable rhythms (e.g. PEA) may have distinct pathophysiologic origins. It is reasonable to administer epinephrine ASAP to these non-shockable rhythms.

4

Use maximum Oxygen during CPR

Use maximum RO2 during CPR. This recommendation was strengthened, but remember to titrate your oxygen after ROSC.

5

ECMO is a possible alternative

Venoarterial extracorporeal membrane oxygenation (ECMO) is a possible alternative to conventional CPR in patients with refractory cardiac arrest if the etiology is thought to be reversible.
