### 1 1 3 Changing The Equation With The Booming Hispanic Market:

**What Fuels the Boom Drives the Bust** Jihad Dagher, Mr. Ning Fu, 2011-09-01 We show that the lightly regulated non bank mortgage originators contributed disproportionately to the recent boom bust housing cycle Using comprehensive data on mortgage originations which we aggregate at the county level we first establish that the market share of these independent non bank lenders increased in virtually all US counties during the boom We then exploit the heterogeneity in the market share of independent lenders across counties as of 2005 and show that higher market participation by these lenders is associated with increased foreclosure filing rates at the onset of the housing downturn We carefully control for counties economic demographic and housing market characteristics using both parametric and semi nonparametric methods We show that this relation between the pre crisis market share of independents and the rise in foreclosure is more pronounced in less regulated states The macroeconomic consequences of our findings are significant we show that the market share of these lenders as of 2005 is also a strong predictor of the severity of the housing downturn and subsequent rise in unemployment Overall our findings lend support to the view that more stringent regulation could have averted some of the volatility on the housing market during the recent boom bust episode *The IWSR Drinks Record*, 2007 *American Book Publishing Record*, 2007

economists and practitioners in developing countries Lance Taylor's innovative work represents a landmark in this field. It codifies a new generation of structuralist macroeconomic models that incorporate the economic power relationships of key institutions and groups, integrates both finance and real macroeconomics, and covers a diverse range of experience in the developing world over the past three decades. In an introduction, Taylor explains his methodology, describes assumptions underlying the models used, and reviews theories that relate economic growth and the role of financial assets. He then takes up basic structuralist models of a closed economy and moves on to consider the open economy cases. He incorporates the latest developments in the field: inflation, financial crisis, exchange rate management, increasing returns, and the like, in a treatment that departs substantially from economic orthodoxy. Taylor first addresses the question of how to specify closure or define the causal structure of macro models. He also considers how income redistribution influences growth and output, and how income redistribution interacts with inflation. Next, an investment-driven, non-full employment growth model draws on ideas introduced earlier to illustrate how different sorts of macroeconomic policies affect short-run adjustment and growth prospects over time. Taylor then turns to the problems proposed by economic openness in a stylized, semi-industrialized country, starting with international trade. A fix-price, flex-price model is developed, and additional models demonstrate cases of policy relevance, as well as interactions between class conflict and growth.
