Wang, Nazih K. Shamas, Yung-Tse Hung, 2010-03-10 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken Environmental Biotreatment Catherine N. Mulligan, 2002-02 This book examines the chemicals most commonly encountered in the major media and thoroughly reviews 26 principal biological technologies available for their treatment Using the author's at a glance chart readers can quickly determine if a method would work in their processes Biotreatment technologies covered include activated sludge processes lagoons and ponds wetlands anaerobic wastewater treatment and digestion bioleaching phytoremediation land farming slurry reactors and trickling filters **Industrial Wastewater Management, Treatment, and Disposal, 3e MOP FD-3** Water Environment Federation, 2008-06-17 The Latest Tactics and Strategies for Treating Every Kind of Industrial Wastewater Industrial Wastewater Management offers proven methods to help you treat toxic concentrated and polluted water Complete with illustrations and tables throughout this authoritative guide contains information on the newest chemicals significant treatment studies efficient control processes and the latest instrumentation Industrial Wastewater Management equips you with the know how for treating and removing heavy metals arsenic selenium and mercury by providing detailed descriptions of pretreatment processes design criteria and process performance Features include Characteristic sampling and treatment studies The latest techniques and materials for heavy metal removal Arsenic selenium and mercury treatment processes
