Biology HI Paper 1 November 2008:

The Economics of Biofuels Stefania Bracco, 2016-06-17 Biofuels are a renewable source of energy used mainly for transportation. They link together food, energy and natural resources sectors and involve ecological, social and inequality issues. They are an emblematic example of the interactions between economic, environmental, social and political decisions and as a recent and complex issue require updated and detailed information to be understood. This book aims to shed light on several economic, social and environmental issues connected to biofuel production and policies. *The Economics of Biofuels* adopts detailed descriptions, rigorous data analysis and precise econometric methods to estimate the effects of biofuel on different socio-economic factors, avoiding complicated and sometimes ineffective models based on context-specific parameters. In particular, the book focuses on the impact of bioenergy policy on biocommodity production and trade and on the related phenomenon of land acquisitions to grow biofuel commodities. The book's main findings are derived by an original and unique dataset collecting information on the investors acquiring land in Africa and on the voluntary standard certification and labelling schemes adopted by them as Corporate Social Responsibility (CSR) strategy. The analysis links together in an original way public and private initiatives to make biofuel sustainable. Therefore, this book represents an improvement in the understanding of biofuel production and policy's sustainability. This book is of interest to those who study environmental economics, agricultural economics and sustainable development. It is also suitable for those in the renewable energy sector with a particular focus on biofuel sustainability.

Debating Human Genetics Alexandra Plows, 2010-07-20 *Debating Human Genetics* examines contemporary public debate on emerging developments in medical genetics including cloning, gene therapy, gene patenting, biobanks, genetic testing and screening and pharmacogenomics. **Turfgrass** John C. Stier, Brian P. Horgan, Stacy A. Bonos, 2020-01-22 Sustainability is a key framework for analyzing biological systems and turfgrass is no exception. It is part of a complex that encompasses turfgrass interactions with different environments and the suitability of different turfgrasses for specific environments. In addition to its biological role, turfgrass in the form of lawns, green spaces and playing surfaces brings beneficial sociological effects to an increasingly urbanized society. This book presents a comprehensive overview of current knowledge and issues in the field of turfgrass research and management, including the genetics and breeding, the diseases and pests and the ecology of turfgrasses and will appeal to a broad spectrum of readers.

Energy and Sustainability II A. Mammoli, C. A. Brebbia, 2009-06-08 The way in which our society exists, operates and develops is strongly influenced by the way in which energy is produced and consumed. No process in Industry can be performed without sufficient supply of energy and without Industry there can be no production of commodities on which the existence of modern Society depends. The energy systems evolved over a long period and more rapidly over the last two centuries as a response to the requirements of Industry and Society starting from combustion of fuels to exploiting nuclear energy and renewable resources. It is clear that the evolution of the energy systems is a continuous

process which involves constant technological development and innovation The presentation on the Second International Conference includes Renewable Energy Technologies Energy Management Energy Policies Energy and the Environment Energy Analysis Energy Efficiency Energy Storage and Management

Barcoding Nature Claire Waterton, 2017-07-05

DNA Barcoding has been promoted since 2003 as a new fast digital genomics based means of identifying natural species based on the idea that a small standard fragment of any organism's genome a so called micro genome can faithfully identify and help to classify every species on the planet The fear that species are becoming extinct before they have ever been known fuels barcoders and the speed scope economy and user friendliness claimed for DNA barcoding as part of the larger ferment around the genomics revolution has also encouraged promises that it could inspire humanity to reverse its biodiversity destructive habits This book is based on six years of ethnographic research on changing practices in the identification and classification of natural species Informed both by Science and Technology Studies STS and the anthropology of science the authors analyse DNA barcoding in the context of a sense of crisis concerning global biodiversity loss but also the felt inadequacy of taxonomic science to address such loss The authors chart the specific changes that this innovation is propelling in the collecting organizing analyzing and archiving of biological specimens and biodiversity data As they do so they highlight the many questions ambiguities and contradictions that accompany the quest to create a genomics based environmental technoscience dedicated to biodiversity protection They ask what it might mean to recognise ambiguity contradiction and excess more publicly as a constitutive part of this and other genomic technosciences Barcoding Nature will be of interest to students and scholars of sociology of science science and technology studies politics of the environment genomics and post genomics philosophy and history of biology and the anthropology of science

Commercially important sea cucumbers of the world Purcell, S.W.,Lovatelli, A.,Gonzalez Wanguemert, M.,Solis Marin, F. A.,Samyn, Y.,Conand, C.,2023-06-09 Sea cucumbers are harvested and traded in more than 90 countries worldwide They are exploited in industrial and small scale fisheries nearly from pole to pole especially in the tropics In some fisheries more than 20 species are exploited by fishers Fishers in general know how to distinguish the species they harvest often identifying them with local names For fishery officers and even biologists recognizing sea cucumber species remains daunting however as they are confronted only with the final product b che de mer or trepang which is the processed cooked and dried product This field guide offers a tool for fishery managers scientists trade officers and industry workers to recognize live and processed cooked and dried animals This animal resource is mainly exported to Asian markets where it is sold mainly but not exclusively as a luxury food item This book provides identification information on 84 species of sea cucumbers that are commonly or opportunistically as bycatch exploited around the world The list is certainly not all encompassing as some other sea cucumber species are also exploited More scientific data and accounts are needed for species from some regions such as the Eastern Atlantic Ocean The accounts are based on more than 270 reports and research articles and on comments and reviews by taxonomists and field workers Two page identification sheets provide selected information to enable similar species to be distinguished from each other both in the live and processed dried forms Where available the following information for each species has been included scientific and known common names used in different countries and regions scientific illustrations of the body and ossicles descriptions of ossicles present in different body parts a colour photograph of live and dried specimens basic information on size habitat biology fisheries human consumption market value and trade geographic distribution maps The volume is fully indexed and contains an introduction a glossary simplified dichotomous keys to live animals and dried products and a dedicated bibliography Readers are encouraged to base their identifications on a combination of morphological features samples of ossicles from different body parts and information on what habitat and locality the species was found

Filamentous Bacteriophage in Bio/Nano/Technology, Bacterial Pathogenesis and Ecology Jasna Rakonjac,Bhabatosh Das,Ratmir Derda,2017-02-16 Filamentous phage genus Inovirus infect almost invariably Gram negative bacteria They are distinguished from all other bacteriophage not only by morphology but also by the mode of their assembly a secretion like process that does not kill the host Classic Escherichia colifilamentous phage Ff f1 fd and M13 are used in display technology and bio nano technology whereas filamentous phage in general have been put to use by their bacterial hosts for adaptation to environment

pathogenesis biofilm formation horizontal gene transfer and modulating genome stability Many filamentous phage have a symbiotic life style that is often manifested by inability to form plaques preventing their identification by standard phage hunting techniques while the absence or very low sequence conservation between phage infecting different species often complicates their identification through bioinformatics Nevertheless the number of discovered filamentous phage is increasing rapidly along with realization of their significance Temperate filamentous phage whose genomes are integrated into the bacterial chromosome of pathogenic bacteria often modulate virulence of the host The *Vibrio cholerae* phage CTXf genome encodes cholera toxin whereas many filamentous prophage influence virulence without encoding virulence factors The nature of their effect on the bacterial pathogenicity and overall physiology is the next frontier in understanding intricate relationship between the filamentous phage and their hosts Phage display has been widely used as a combinatorial technology of choice for discovery of therapeutic antibodies and peptide leads that have been applied in the vaccine design diagnostics and drug development or targeting over the past thirty years Virion proteins of filamentous phage are integral membrane proteins prior to assembly hence they are ideal for display of bacterial surface and secreted proteins The use of this technology at the scale of microbial community has potential to identify host interacting proteins of uncultivable or low represented community members Recent applications of Ff filamentous phage extend into protein evolution synthetic biology and nanotechnology In many applications phage serves as a monodisperse long aspect nano scaffold of well defined shape Chemical or genetic modifications of this scaffold are used to introduce the necessary functionalities such as fluorescent labels ligands that target specific proteins or peptides that promote formation of inorganic or organic nanostructures We anticipate that the future holds development of new strategies for particle assembly site specific multi functional modifications and improvement of existing modification strategies These improvements will render the production of filamentous phage templated materials safe and affordable allowing their applications outside of the laboratory
