Pre-university Engineering Education Marc J. de Vries, Lena Gumaelius, Inga-Brit Skogh, 2016-07-28 Pre university engineering education has become the topic of increasing interest in technology education circles It can provide content for the E in STEM Science Technology Engineering and Mathematics education which is in the interest of technology educators at different educational levels as it builds the bridge between them and the science and mathematics educators In this book goals for pre university engineering education are explored as well as existing practices from a variety of countries The coming years will show if pre university engineering education will catch on The trend towards STEM integrated education that today can be seen in many countries will certainly create a further need and stimulus for that to happen Hopefully this book can contribute to such a development of both formal and informal K 12 engineering education Not only for preparing the next generation of engineers but also for the technological literacy of future citizens

Artificial Intelligence and the Future of Defense Stephan De Spiegeleire, Matthijs Maas, Tim Sweijs, 2017-05-17 Artificial intelligence AI is on everybody s minds these days Most of the world s leading companies are making massive investments in it Governments are scrambling to catch up Every single one of us who uses Google Search or any of the new digital assistants on our smartphones has witnessed first hand how quickly these developments now go Many analysts foresee truly disruptive changes in education employment health knowledge generation mobility etc But what will AI

mean for defense and security In a new study HCSS offers a unique perspective on this question Most studies to date quickly jump from AI to autonomous mostly weapon systems They anticipate future armed forces that mostly resemble today s armed forces engaging in fairly similar types of activities with a still primarily industrial kinetic capability bundle that would increasingly be AI augmented The authors of this study argue that AI may have a far more transformational impact on defense and security whereby new incarnations of armed force start doing different things in novel ways The report sketches a much broader option space within which defense and security organizations DSOs may wish to invest in successive generations of AI technologies It suggests that some of the most promising investment opportunities to start generating the sustainable security effects that our polities societies and economies expect may lie in in the realms of prevention and resilience Also in those areas any large scale application of AI will have to result from a preliminary open minded on all sides public debate on its legal ethical and privacy implications The authors submit however that such a debate would be more fruitful than the current heated discussions about killer drones or robots Finally the study suggests that the advent of artificial super intelligence i e AI that is superior across the board to human intelligence which many experts now put firmly within the longer term planning horizons of our DSOs presents us with unprecedented risks but also opportunities that we have to start to explore The report contains an overview of the role that intelligence the computational part of the ability to achieve goals in the world has played in defense and security throughout human history a primer on AI what it is where it comes from and where it stands today in both civilian and military contexts a discussion of the broad option space for DSOs it opens up 12 illustrative use cases across that option space and a set of recommendations for especially small and medium sized defense and security organizations
