Halophilic Microorganisms* R. Thane Papke,Aharon Oren,Antonio Ventosa,Jesse Dillon,2015-07-08 The Halophiles 2013
meeting is a multidisciplinary international congress with a strong history of regular triennial meetings since 1978 Our
mission is to bring researchers from a wide diversity of investigation interests e g protein and species evolution niche
adaptation ecology taxonomy genomics metagenomics horizontal gene transfer gene regulation DNA replication repair and
recombination signal transduction community assembly and species distribution astrobiology biotechnological applications
adaptation to radiation desiccation osmotic stress into a single forum for the integration and synthesis of ideas and data from
all three domains of life and their viruses yet from a single environment salt concentrations greater than seawater This cross
section of research informs our understanding of the microbiological world in many ways The halophilic environment is
extreme especially above 10% NaCl restricting life solely to microbes The microorganisms that live there are adapted to
extreme conditions and are notable for their ability to survive high doses of radiation and desiccation Therefore the
hypersaline environment is a model system both the abiotic and biologic factors for insightful understanding regarding
conditions and life in the absence of plant and animals e g life on the early earth and other solar system bodies like Mars and

stromatolites which are enormous microbially produced structures fashioned during the Precambrian and still seen today in
places like Shark s Bay Australia Hypersaline systems are island like habitats spread patchily across the earth s surface and
similar to the Galapagos Islands represent unique systems excellent for studying the evolutionary pressures that shape
microbial community assembly adaptation and speciation The unique adaptations to this extreme environment produce
valuable proteins enzymes and other molecules capable of remediating harsh human instigated environments and are useful
for the production of biofuels vitamins and retinal implants for example This research topic is intended to capture the
