Behavioral Science & Policy: Volume 2, Issue 1 Craig Fox, Sim B. Sitkin, 2016-11-22 The success of nearly all public and private sector policies hinges on the behavior of individuals, groups, and organizations. Today such behaviors are better understood than ever thanks to a growing body of practical behavioral science research. However, policymakers often are unaware of behavioral science findings that may help them craft and execute more effective and efficient policies. The pages of this new journal will become a meeting ground, a place where scientists and non-scientists can encounter clearly described behavioral research that can be put into action. By design, the scope of BSP is broad, with topics spanning health care, financial decisionmaking, energy, and the environment, education, and culture, justice, and ethics, and workplace practices. Contributions will be made by researchers with expertise in psychology, sociology, law, behavioral economics, organization science, decision science, and marketing. The journal is a key offering of the Behavioral Science Policy Association in partnership with the Brookings Institution. The mission of BSPA is to foster dialog between social scientists, policymakers, and other practitioners in order to promote the application of rigorous empirical behavioral science in ways that serve the public interest. BSPA does not advance a particular agenda or political perspective. Neural Implementations of Expertise Merim Bilalić, Robert Langner, Guillermo Campitelli, Luca Turella, Wolfgang Grodd, 2015-12-18 When we think about expertise we usually consider people who master tasks at a level not reachable by most other people Although we rarely realise it however most humans are experts in many aspects of everyday life This expertise enables us to find our way through a complex environment that is our life For instance we can instantly recognise multiple objects and relations between them to form a meaningful unit such as an office Thus research on expertise is not only important to investigate the cognitive and neural processes within an elite group but it is also a powerful tool to understand how everyone can acquire complex skills The goal of this Research Topic is to shed further light on the common and distinct neural mechanisms that implement various kinds of expertise We broadly define expertise as skill in any perceptual cognitive social or motor domain with the common core being optimised information processing due to knowledge acquired from repeated experiences Thus we are interested in the full range of mental processes modulated or modified by expertise from simple object or pattern recognition to complex decision making

or problem solving in a particular domain These domains can range from everyday or occupational expertise to sports and rather artificial domains such as board games In all cases the aim should be to elucidate how the brain implements these sometimes incredible feats We are particularly interested in connecting cognitive theories about expertise and expertise related performance differences with models and data on the neural implementation of expertise We welcome original research contributions using the full range of behavioural neuroscience methods as well as theoretical methodological or historical reviews and opinion papers focusing on any of the above mentioned aspects
