

III. **Cellular Respiration:** Process that takes **energy** from sugar molecules and places it in molecules of _____.

A) _____ is the molecule all life uses for **energy**.

- No organism can get energy from sunlight or sugar without first putting the energy into ATP.

B) Requires _____, _____ and _____.

C) _____ and _____ are waste products.

D) Most organisms carry out **aerobic respiration** (uses oxygen) in their **mitochondria**.

E) **Anaerobic respiration** does not require oxygen, but gives less ATP (energy) for each molecule of sugar.

- When exercise causes human muscles to run out of oxygen, their cells will do **anaerobic respiration**. The waste product, **lactic acid**, causes muscles to "burn" so that you will **stop**.

F) **Photosynthesis and Cellular Respiration** are opposite reactions! They are also important in cycling oxygen, carbon, hydrogen and water through the environment.

G) **Common mistakes:**

- "Plants use photosynthesis, animals use respiration."
All organisms, including plants, use respiration to get their energy.
- "Respiration is breathing."
Breathing is not respiration. Breathing exchanges the gases needed for respiration. Inhaling and exhaling does not give you ATP.
- "Oxygen is used to breathe."
This is backwards. Breathing is used to get oxygen which is used for respiration. Without oxygen, you have no respiration, no ATP, and no energy.
- "All living things need oxygen/need to breathe."
Anaerobic organisms do not need oxygen, and do not have to breathe.
