Things to know:

CLASSIFICATION OF MATTER

Pure substances are elements or compounds. A pure substance has a specific melting or boiling point.

Mixtures are combinations of two or more substances. They are not chemically bonded together. They keep their own physical properties because they do not create a new substance. You can tell if a substance is a mixture if it can easily be separated into its components (such as through filtration or with a magnet.)

A

B

C

- Samples A, B, and C contain samples of matter.
 - Explain in terms of composition why sample A represents a pure substance.
It contains only molecules of the same arrangement and relative size.
 - Explain why sample C would represent a mixture of Fluorine and Hydrogen chloride.
Fluorine is diatomic so represented by 2 symbols of the same size. HCl is then represented by a small circle for H attached to a larger circle for Cl.
 - Contrast sample A and B in terms of pure substances and mixtures.
B and C are mixtures of 2 different molecules while A is all the same molecules.

Things to know:

PERIODIC TABLE

Periodic Table: chart of elements arranged in rows by atomic number (number of protons)

Family Groups: columns on the periodic table; group number is equal to the valence electrons

Chemical Symbol: element abbreviation (H, He, Cu)

Atomic Mass: protons + neutrons

Metals: conduct heat/electricity; ductile (can be pulled into wires); malleable (bendable); shiny;

underrepresented students earning baccalaureate degrees and entering graduate school in STEM is the goal of LSAMP. This goal has been nearly achieved through the formation of alliances of degree granting institutions of higher learning varying from community colleges to major research institutions. Currently there are 59 alliances including more than 400 institutions. LSAMP is responsible for more than 650,000 bachelor's degrees earned by minority students in STEM. The papers for this Research Topic should focus on the use of LSAMP activities, programs and collaborations to develop pathways to success and graduation of STEM majors from minority groups that are underrepresented in STEM. These pathways can include any segment from pre-college through graduate school. Areas of special interest include mentoring, research experiences, transitions between levels and novel approaches for retention. The studies should be research based and rigorous. They can be pure research, studies, curriculum and design or literature reviews but they must be at a cutting edge level and be subject to detailed review and assessment.

Survival Handbook for the New Chemistry Instructor Diane M. Bunce, Cinzia M. Muzzi, 2004. This book provides an overview of the issues facing new chemistry faculty in preparation for teaching. Serving as a reference to answer specific questions new chemistry faculty encounter, this book is comparable to sitting down with a colleague in the department and talking through some ideas or gaining some pointers on how to avoid common pitfalls. It is the one single place new chemistry faculty can go to find practical information on how to teach and how to prepare for teaching their first course. Chapters are written both by established experts in the field and by new professors within their first couple of years of teaching.

Chemistry Neil D. Jespersen, Alison Hyslop, 2021-11-02. Chemistry: The Molecular Nature of Matter, 8th Edition continues to focus on the intimate relationship that exists between structure at the atomic/molecular level and the observable macroscopic properties of matter. Key revisions in this edition focus on three areas: The deliberate inclusion of more updated real-world examples that relate common real-world student experiences to the science of chemistry. Simultaneously, examples and questions have been updated to align them with career concepts relevant to the environmental, engineering, biological, pharmaceutical and medical sciences. Providing students with transferable skills with a focus on integrating metacognition and three-dimensional learning into the text. When students know what they know, they are better able to learn and incorporate the material. Providing a total solution through New WileyPLUS by fully integrating the enhanced eText with online assessment, answer specific responses and additional practice resources. The 8th edition continues to emphasize the importance of applying concepts to problem solving to achieve high-level learning and increase retention of chemistry knowledge. Problems are arranged in an intuitive confidence-building order.
