

Inscribed Angle Theorem

Special Case: Inscribed angle includes a diameter

The yellow angle inscribes the yellow arc

Connect the radii ends to make a triangle

Label $\angle a$ and $\angle b$

$\triangle$ is isosceles, so $\angle a = \angle b$

$= 180^\circ = \text{yellow arc} + 2\angle a$
(Exterior Angle Theorem)

$\triangle$ is isosceles, so $\angle c = \angle c$

Sum of angles of $\triangle = 180^\circ$

$2a + 2\angle c = 180^\circ = \text{yellow arc}$

$2\angle c = \text{yellow arc}$
(Exterior Angle Theorem)

$= \frac{1}{2}$

An inscribed angle is half of the central angle

College Geometry with GeoGebra Barbara E. Reynolds, William E. Fenton, 2021-01-20 From two authors who embrace technology in the classroom and value the role of collaborative learning comes *College Geometry Using GeoGebra*, a book that is ideal for geometry courses for both mathematics and math education majors. The book's discovery based approach guides students to explore geometric worlds through computer based activities, enabling students to make observations, develop conjectures, and write mathematical proofs. This unique textbook helps students understand the underlying concepts of geometry while learning to use GeoGebra software, constructing various geometric figures and investigating their properties, relationships, and interactions. The text allows students to gradually build upon their knowledge as they move from fundamental concepts of circle and triangle geometry to more advanced topics such as isometries and matrices, symmetry in the plane, and hyperbolic and projective geometry. Emphasizing active collaborative learning, the text contains numerous fully integrated computer lab activities that visualize difficult geometric concepts and facilitate both small group and whole class discussions. Each chapter begins with engaging activities that draw students into the subject matter, followed by detailed discussions that solidify the student's understanding.

Exploring Advanced Euclidean Geometry with GeoGebra

Gerard A. Venema, 2013-12-31 This book provides an inquiry-based introduction to advanced Euclidean geometry. It utilizes dynamic geometry software, specifically GeoGebra, to explore the statements and proofs of many of the most interesting theorems in the subject. Topics covered include triangle centers, inscribed, circumscribed, and escribed circles, medial and orthic triangles, the nine-point circle, duality, and the theorems of Ceva and Menelaus, as well as numerous applications of those theorems. The final chapter explores constructions in the Poincaré disk model for hyperbolic geometry. The book can be used either as a computer laboratory manual to supplement an undergraduate course in geometry or as a stand-alone introduction to advanced topics in Euclidean geometry. The text consists almost entirely of exercises with hints that guide students as they discover the geometric relationships for themselves. First, the ideas are explored at the computer, and then those ideas are assembled into a proof of the result under investigation. The goals are for the reader to experience the joy of discovering geometric relationships, to develop a deeper understanding of geometry, and to encourage an appreciation for the beauty of Euclidean geometry.
