The Phytochemical Landscape Mark D. Hunter, 2016-08-09 The dazzling variation in plant chemistry is a primary mediator of trophic interactions including herbivory predation parasitism and disease At the same time such interactions feed back to influence spatial and temporal variation in the chemistry of plants In this book Mark Hunter provides a novel approach to linking the trophic interactions of organisms with the cycling of nutrients in ecosystems Hunter introduces the concept of the phytochemical landscape the shifting spatial and temporal mosaic of plant chemistry that serves as the nexus between trophic interactions and nutrient dynamics He shows how plant chemistry is both a cause and consequence of trophic interactions and how it also mediates ecosystem processes such as nutrient cycling Nutrients and organic molecules in plant tissues affect decomposition rates and the fluxes of elements such as carbon nitrogen and phosphorus The availability of these same nutrients influences the chemistry of cells and tissues that plants produce In combination these feedback routes generate pathways by which trophic interactions influence nutrient dynamics and vice versa mediated through plant chemistry Hunter provides evidence from terrestrial and aquatic systems for each of these pathways and describes how a focus on the phytochemical landscape enables us to better understand and manage the ecosystems in which we live Essential reading for students and researchers alike this book offers an integrated approach to population community and ecosystem level ecological processes

Environmental Radiobiology Paul N. Schofield,Carmel E. Mothersill,2023-10-17 This book focuses on the impacts of anthropogenic radiation on wildlife and ecosystems and provides an in depth look at the approaches and available tools we can use to gain information about biological effects of radiation in the environment The nuclear accidents in Chornobyl in 1986 and Fukushima in 2011 focussed the attention of the world on the vulnerability of ecosystems to radiation In Chornobyl there still remains an exclusion zone where levels are considered to be too high for people and impacts on terrestrial and aquatic ecosystems can still be measured 35 years later In the area impacted by the Fukushima disaster intense remediation is still under way at tremendous cost and causing widespread disruption to the environment That accident impacted the terrestrial and marine ecosystems In both accidents it became obvious that a radiation protection

framework focussing on protection of humans a single species and using evacuation as a key strategy was not sufficient to protect the natural environment The complexity of ecosystems makes developing a protection framework very challenging but in order to even start the process it is vital to gather information about likely impacts of low dose exposures on wildlife and to develop monitoring tools to measure changes over time This book contains reviews and original research aimed at filling our knowledge gaps about these important areas Environmental Radiobiology will be a key resource for academics researchers and advanced students of Radiobiology Radioecology Biology Ecology Biomedicine and Research Methods The chapters included in this book were originally published as a special issue of International Journal of Radiation Biology

Current Challenges in Modeling Cellular Metabolism Daniel Machado,Kai H. Zhuang,Nikolaus Sonnenschein,Markus J. Herrgård,2016-01-21 Mathematical and computational models play an essential role in understanding the cellular metabolism They are used as platforms to integrate current knowledge on a biological system and to systematically test and predict the effect of manipulations to such systems The recent advances in genome sequencing techniques have facilitated the reconstruction of genome scale metabolic networks for a wide variety of organisms from microbes to human cells These models have been successfully used in multiple biotechnological applications Despite these advancements modeling cellular metabolism still presents many challenges The aim of this Research Topic is not only to expose and consolidate the state of the art in metabolic modeling approaches but also to push this frontier beyond the current edge through the introduction of innovative solutions The articles presented in this e book address some of the main challenges in the field including the integration of different modeling formalisms the integration of heterogeneous data sources into metabolic models explicit representation of other biological processes during phenotype simulation and standardization efforts in the representation of metabolic models and simulation results

Environmental Risk Modelling in Banking Magdalena Ziolo,2022-12-29 Environmental risk directly affects the financial stability of banks since they bear the financial consequences of the loss of liquidity of the entities to which they lend and of the financial penalties imposed resulting from the failure to comply with regulations and for actions taken that are harmful to the natural environment This book explores the impact of environmental risk on the banking sector

and analyzes strategies to mitigate this risk with a special emphasis on the role of modelling It argues that environmental risk modelling allows banks to estimate the patterns and consequences of environmental risk on their operations and to take measures within the context of asset and liability management to minimize the likelihood of losses An important role here is played by the environmental risk modelling methodology as well as the software and mathematical and econometric models used It examines banks responses to macroprudential risk particularly from the point of view of their adaptation strategies the mechanisms of its spread risk management and modelling and sustainable business models It introduces the basic concepts definitions and regulations concerning this type of risk within the context of its influence on the banking industry The book is primarily based on a quantitative and qualitative approach and proposes the delivery of a new methodology of environmental risk management and modelling in the banking sector As such it will appeal to researchers scholars and students of environmental economics finance and banking sociology law and political sciences **Sustainable**
