**October 2019 Monthly Current Affairs with MCQs for Competitive Exams** Disha Experts,2019-09-25      Policy-Making in the GCC Neil Quilliam,Mark C. Thompson,2019-10-31

The GCC is a major player in the post 2011 reordering of the Middle East Despite the rise in prominence of individual Gulf states especially Kuwait Qatar Saudi Arabia and the United Arab Emirates and the growth of the GCC as a collective entity surprisingly little attention has been paid to the actual mechanics of policy making in the region This book analyses the vital role that institutions are coming to play in shaping policy in the Gulf Arab states The research coincides with two key developments that have given institutions new importance in the policy process the emergence of a new generation of leaders in the Gulf and the era of low oil prices Both developments along with dramatic demographic change have compelled state and citizens to re evaluate the nature of the social contract that binds them together Contributors assess the changing

relationship between state and citizen and evaluate the role that formal and informal institutions play in mediating such change and informing policy The book shows how academic social and economic institutions are responding to the increasingly complex process of decision making where citizens demand better services and further empowerment and states are obliged to seek wider counsel although wanting to retain ultimate authority With contributions from both academics and practitioners this book will be highly relevant for researchers and policymakers alike

*Advances in Hydrologic Forecasts and Water Resources Management* Fi-John Chang, Shenglian Guo, 2021-01-20 The impacts of climate change on water resource management as well as increasingly severe natural disasters over the last decades have caught global attention Reliable and accurate hydrological forecasts are essential for efficient water resource management and the mitigation of natural disasters While the notorious nonlinear hydrological processes make accurate forecasts a very challenging task it requires advanced techniques to build accurate forecast models and reliable management systems One of the newest techniques for modeling complex systems is artificial intelligence AI AI can replicate the way humans learn and has great capability to efficiently extract crucial information from large amounts of data to solve complex problems The fourteen research papers published in this Special Issue contribute significantly to the uncertainty assessment of operational hydrologic forecasting under changing environmental conditions and the promotion of water resources management by using the latest advanced techniques such as AI techniques The fourteen contributions across four major research areas 1 machine learning approaches to hydrologic forecasting 2 uncertainty analysis and assessment on hydrological modeling under changing environments 3 AI techniques for optimizing multi objective reservoir operation 4 adaption strategies of extreme hydrological events for hazard mitigation The papers published in this issue will not only advance water sciences but also help policymakers to achieve more sustainable and effective water resource management

**Armed Conflict, Women and Climate Change** Jody M. Prescott, 2018-11-21 The gender differentiated and more severe impacts of armed conflict upon women and girls are well recognised by the international community as demonstrated by UN Security Council Resolution UNSCR 1325 on Women Peace and Security and subsequent resolutions Similarly the development community has identified gender differentiated impacts upon women and girls as a result of the effects of climate change Current research and analysis has reached no consensus as to any causal relationship between climate change and armed conflict but certain studies suggest an indirect linkage between climate change effects such as food insecurity and armed conflict Little research has been conducted on the possible compounding effects that armed conflict and climate change might have on at risk population groups such as women and girls Armed Conflict Women and Climate Change explores the intersection of these three areas and allows the reader to better understand how military organisations across the world need to be sensitive to these relationships to be most effective in civilian centric operations in situations of humanitarian relief peacekeeping and even armed conflict This book examines strategy and military doctrine from NATO the UK US and Australia and explores key

issues such as displacement food and energy insecurity and male out migration as well as current efforts to incorporate gender considerations in military activities and operations This innovative book will be of great interest to students and scholars of international relations international development international security sustainability gender studies and law
