Cycling Of Matter:

The Life Cycle of Everyday Stuff Mike Reeske, Shirley Watt Ireton, National Science Teachers Association, 2001 In the context of life cycles these units use central science concepts to explore the energy raw materials and waste issues that are the history of any manufactured product As students consider the trade offs made at each step they will learn to recognize the decisions made to balance economic developmental and environmental needs

Making Sense of Secondary Science Rosalind Driver, Peter Rushworth, Ann Squires, Valerie Wood-Robinson, 2004-03-10 When children begin secondary school they already have knowledge and ideas about many aspects of the natural world from their experiences both in primary classes and outside school This collection of support materials is designed especially for teachers of the early years in secondary school to give guidance both on the ideas which children are likely to bring with them and also on using these ideas to help pupils to make sense of their experiences in science lessons The materials are in 24 sections structured around three themes life and living processes materials and their properties and physical processes Included in each section is a science map identifying key science ideas and also a set of learning guides which give detailed advice on helping children to develop these ideas Written in collaboration with teachers field tested in schools and suitable for use with any published science scheme these materials will be an essential resource for all science teachers who are planning teaching schemes and developing science lessons within the National Curriculum A separate paperback Making Sense of Secondary Science Research into Children s Ideas comes with the file and is also available separately This provides a summary of research in the area and a detailed bibliography for those who want to pursue certain aspects further

Cities as Sustainable Ecosystems Peter Newman, Isabella Jennings, 2012-09-26 Modern city dwellers are largely detached from the environmental effects of their daily lives The sources of the water they drink the food they eat and the energy they consume are all but invisible often coming from other continents and their waste ends up in places beyond their city boundaries Cities as Sustainable Ecosystems shows how cities and their residents can begin to reintegrate into their bioregional environment and how cities themselves can be planned with nature s organizing principles in mind Taking cues from living systems for sustainability strategies Newman and Jennings reassess urban design by exploring flows of energy materials and information along with the interactions between human and non human parts of the system Drawing on examples from all corners of the world the authors explore natural patterns and processes that cities can emulate in order to move toward sustainability Some cities have adopted simple strategies such as harvesting rainwater greening roofs and producing renewable energy Others have created biodiversity parks for endangered species community gardens that support a connection to their foodshed and pedestrian friendly spaces that encourage walking and cycling A powerful model for urban redevelopment Cities as Sustainable Ecosystems describes aspects of urban ecosystems from the visioning process to achieving economic security to fostering a sense of place
