Ravishankar,2016-09-08 Bananas and plantains are among the most important food and cash crops in the world They are cultivated in more than 135 countries across the tropics and subtropics with an annual global production of ca 130 million metric tonnes Though bananas are one of the most important components of food security in many developing countries banana production is threatened by both abiotic and biotic stresses These include a wide range of diseases and pests such as bunchy top virus burrowing nematodes black Sigatoka or black leaf streak Fusarium wilt etc In recent years considerable progress has been made and several biotechnological and genomic tools have been employed to help understand and unravel the mysterious banana genome Molecular and genomic studies have helped to decipher the Musa genome and its evolution Genetic linkage map and whole genome sequencing of both Musa acuminata and Musa balbisiana progenitors of cultivated banana have completely changed the way of thinking and the approach on banana crop improvement Whole genome sequencing has helped to improve the selection of quantitative traits such as yield as well as the selection of optimal parents for developing required hybrids in breeding programs Gene isolation and the analysis of mutants have helped in the characterization of genes of agronomic value and the associated regulatory sequences With the advent of molecular markers and new statistical tools it is now possible to measure the diversity identify genes and useful alleles linked to important agronomic traits Further these alleles can be incorporated into cultivars through marker assisted selection or through transgenic approach Transgenic approaches are potential tools for direct transfer of these genes into popular cultivars which are generally not amenable for conventional breeding techniques in specific with crops such as bananas which are sterile triploid and heterozygous thereby making it difficult to reconstruct the recurrent genotypes in banana Transgenic techniques thus have helped overcome the difficulty of working with sterile triploid banana crop In the last five years enormous amount of new information and techniques have been generated for banana A comprehensive book entitled Banana Genomics and Transgenic Approaches for Genetic improvement on banana genomics latest transgenic technologies and tools available for improved crop development in banana will address all these requirements      **National Union Catalog, 1981** ,1982      *National Union Catalog* ,1982 Includes entries for maps and atlases      Progress in Botany Vol. 79 Francisco M. especially in the Arctic and extreme climate and environmental events are frequently occurring Climate and environmental changes not only have a great impact on society and the economy but also seriously exert far reaching impacts on both human lives and health Therefore revealing the mechanisms behind the climate and environmental changes is critical to advancing our understanding and predicting of the global climate and environmental changes and their impacts Climate change can cause environmental change and environmental change may in turn affect climate change For example the faster Arctic warming can change the mid latitude large scale atmospheric circulation and further modulate the regional air quality through transport and diffusion Conversely the air pollution associated with industrial activities may also affect the regional and global climate through the complicated aerosol climate interaction The limited understanding of these feedback and interactions adds uncertainty to predicting the future evolution of the climate and environment [Catalog of Copyright Entries](#) Library of Congress. F. Denno,John R. Perfect,2012-12-06 Planthoppers include some of the most devastating pests of major agricultural crops throughout the world One species the rice brown planthopper is among the most economically important pests in Asia In past decades

government policies encouraged the control of rice planthoppers with synthetic pesticides a tactic which promoted insecticide resistance and often led to the pesticide induced resurgence of pest populations To deter planthopper outbreaks a more ecologically sound management strategy is being implemented one based on a thorough investigation of population dynamics natural enemies and the genetics of host plant and insecticide adaptation In the natural habitats of North America and Europe scientists have also used planthoppers as model organisms to test ecological and evolutionary theory The consequence of these diverse studies is an extremely scattered literature on planthoppers that has never been synthesized from an ecological perspective This volume summarizes what is known about planthopper ecology and biological control It takes a theoretical approach yet is deeply concerned with the application of theory to the practical problems of pest management

**Phytophthora Infestations in Forest Ecosystems** Bruno Scanu,Thomas Jung,2021-06-02 The oomycete genus Phytophthora represents one of the most notorious groups of tree pathogens in natural and semi natural forest ecosystems Since the discovery in the 1960s of the invasive *P. cinnamomi* threatening some of the world s richest plant communities in Australia numerous Phytophthora diseases have been reported on forest trees worldwide which were previously unknown to science The most notable examples include the oak and beech declines triggered by different Phytophthora spp in Europe and North America the findings of sudden oak death and sudden larch death caused by *P. ramorum* in the Western USA and the U K respectively and the association of *P. austrocedri* with mal del cipr s in Argentina and juniper decline in the U K All

these epidemic events are driven by exotic invasive *Phytophthora* species introduced through infested nursery plants from their native overseas environments In recent years many independent surveys have studied the diversity of *Phytophthora* species and the diseases they are causing across a diverse range of forests and other natural ecosystems This Special Issue presents papers on *Phytophthora* surveys performed in different biogeographic regions and addresses the pathways and ecological and economic impacts of these invasive forest pathogens
