Computer Applications in Near Net-Shape Operations

Andrew Y.C. Nee, Soh K. Ong, Yun G. Wang, 2012-12-06 Having edited Journal of Materials Processing Technology previously entitled Journal of Mechanical Working Technology for close on 25 years I have seen the many dramatic changes that have occurred in the materials processing field Long gone are the days when the only materials processing carried out was virtually the forming of conventional metals and alloys and when the development of a new product or process in a great number of cases called for several months of repetitive trial and error with many mostly intuition or experience based expensive and time consuming modifications being made to the dies until success was achieved Even when a successful product was formed its mechanical properties in terms of springback and dimensional accuracy thickness variations residual stresses surface finish etc remained to be determined Bulk forming operations usually required expensive machining to be carried out on the product to impart the required dimensional accuracy and surface finish Over the years the experience based craft of metal forming has given way to the science of materials processing With the use of the computer forming operations can be simulated with accuracy to determine the best forming route and the associated forming loads and die stresses and to predict the mechanical properties of the formed product even down to its surface texture

Manufacturing and Supply Systems Management

Wu, 2012-12-06 In order to compete in an increasingly demanding market many manufacturing companies have to redesign or restructure their manufacturing systems so that a set of coherent manufacturing strategies can be supported So this book aims to provide a comprehensive treatment of manufacturing strategy analysis MSA and manufacturing systems design MSD The strategic concerns of manufacturing are linked to subsequent manufacturing systems design activities through the use of an effective MSA MSD interface Topics include A structured approach to formulating manufacturing strategies A set of linking processes to translate MSA concerns into relevant MSD action plans Case studies This book is intended to help graduates and industry based professionals to make more informed decisions when working on system design or redesign projects

Computer-Assisted Management and Control of Manufacturing Systems Spyros G. Tzafestas, 2012-12-06 Modern manufacturing systems involve many processes and operations that can be monitored and controlled at several levels of intelligence At the highest level there is a computer that supervises the various manufacturing functions whereas at the lowest level there are stand alone computer controlled

systems of manufacturing processes and robotic cells Until recently computer aided manufacturing systems constituted isolated islands of automation each oriented to a particular application but present day systems offer integrated approaches to manufacturing and enterprise operations These modern systems known as computer integrated manufacturing CIM systems can easily meet the current performance and manufacturing competitiveness requirements under strong environmental changes CIM systems are much of a challenge and imply a systemic approach to the design and operation of a manufacturing enterprise Actually a CIM system must take into account in a unified way the following three views the user view the technology view and the enterprise view This means that CIM includes both the engineering and enterprise planning and control activities as well as the information flow activities across all the stages of the system

Advances in Manufacturing Spyros G. Tzafestas, 2012-12-06 Modern manufacturing systems involve many processes and operations at various hierarchical levels of decision control and execution New applications for systems are arising from the synergy of machines tools robots and computers with management and information technologies Novel systems are designed and put into operation to manufacture old and new high quality products with speed accuracy and economy This book contains over thirty papers that examine state of the art and how to do issues as well as new solutions Topics covered include Process planning scheduling and machine cell design Process monitoring inspection diagnosis and maintenance Forecasting optimization and control Design and control of robotic automated crane systems Applications including laser material processing stereolithography systems alimentary pasta processes and automated robotic road construction and maintenance The book explores key elements and critical factors presents new results and tools that are applicable to real situations

The Organisation of Integrated Product Development Victor Paashuis, 2013-04-17 In today's industries New Product Development NPD is often the focal point of competition Companies that are able effectively to develop produce and introduce new products are the key competitors in markets where variety and time to market play an increasingly important role This examination into the organisation of Integrated Product Development aims to answer the question Which integration mechanisms lead to effective co ordination and overlap of New Product Development activities in which situations The mechanisms strategies and goals knowledge and skills and organisational arrangements are presented and their impact on the results of NPD projects and relationships is discussed An in depth understanding of the background and theory is provided using detailed case studies to illustrate both the human and organisational issues in practice

Intelligent Quality Systems Duc T. Pham, Ercan Oztemel, 2012-12-06 Although the term quality does not have a precise and universally accepted definition its meaning is generally well understood quality is what makes the difference between success and failure in a competitive world Given the importance of quality there is a need for effective quality systems to ensure that the highest quality is achieved within given constraints on human material or financial resources This book discusses Intelligent Quality Systems that is quality systems employing techniques from the field of Artificial Intelligence AI The book focuses on two

popular AI techniques expert or knowledge based systems and neural networks Expert systems encapsulate human expertise for solving difficult problems Neural networks have the ability to learn problem solving from examples The aim of the book is to illustrate applications of these techniques to the design and operation of effective quality systems The book comprises 8 chapters Chapter 1 provides an introduction to quality control and a general discussion of possible AI based quality systems Chapter 2 gives technical information on the key AI techniques of expert systems and neural networks The use of these techniques singly and in a combined hybrid form to realise intelligent Statistical Process Control SPC systems for quality improvement is the subject of Chapters 3 5 Chapter 6 covers experimental design and the Taguchi method which is an effective technique for designing quality into a product or process The application of expert systems and neural networks to facilitate experimental design is described in this chapter
