They have not only played a central role in the theory of data type specification but meanwhile have had a remarkable influence on programming language design system architectures and software tools and environments. The fundamentals of algebraic specification lay a basis for teaching research and development in all those fields of computer science where algebraic techniques are the subject or are used with advantage on a conceptual level. Such a basis however we do not regard to be a synopsis of all the different approaches and achievements but rather a consistently developed theory. Such a theory should mainly emphasize elaboration of basic concepts from one point of view and in a rigorous way reach the state of the art in the field. We understand fundamentals in this context as

- 1 Fundamentals in the sense of a carefully motivated introduction to algebraic specification which is understandable for computer scientists and mathematicians
- 2 Fundamentals in the sense of mathematical theories which are the basis for precise definitions constructions results and correctness proofs
- 3 Fundamentals in the sense of concepts from computer science which are introduced on a conceptual level and formalized in mathematical terms
