Competency-Based Education in Aviation Suzanne K. Kearns, Timothy J. Mavin, Steven Hodge, 2017-05-15 Whether a trainee is studying air traffic control piloting maintenance engineering or cabin crew they must complete a set number of training hours before being licensed or certified The aviation industry is moving away from an hours based to a competency based training system Within this approach training is complete when a learner can demonstrate competent performance Training based on competency is an increasingly popular approach in aviation It allows for an alternate means of compliance with international regulations which can result in shorter and more efficient training programs However there are also challenges with a competency based approach The definition of competency based education can be confusing training can be reductionist and artificially simplistic professional interpretation of written competencies can vary between individuals and this approach can have a high administrative and regulatory burden *Competency Based Education in Aviation Exploring Alternate Training Pathways* explores this approach to training in great detail considering the four aviation professional groups of air traffic control pilots maintenance engineers and cabin crew Aviation training experts were interviewed and have contributed professional insights along with personal stories and anecdotes associated with competency based approaches in their fields Research based and practical strategies for the effective creation delivery and assessment of competency based education are described in detail *Implementing Competency-Based Training and Assessment in Aviation* Norman MacLeod, 2025-09-24 *Implementing Competency Based Training and Assessment in Aviation* explains in detail with examples how to implement Competency Based Training and Assessment in aviation It describes how to develop competence models assess workplace competence and understand the role of competence models in recruitment and selection Taking the framework published by ICAO this book breaks it down into its component parts and explains how to identify the changes in behaviour needed to enable individuals to act safely and efficiently in hazardous environments It outlines the framework that underpins training intervention design and investigates tactics of intervention based on current evidence around efficacy This book acts as a guide to constructing classroom activities that serve as vehicles for addressing the link between declarative and process knowledge under controlled conditions Airline personnel pilots and aviation industry professionals involved in performance assessments and training will benefit from this book Engineering Psychology and Cognitive Ergonomics Don Harris, Wen-Chin Li, 2025-05-29 This two volume set constitutes the thoroughly refereed proceedings of the 22nd International Conference on Engineering Psychology and Cognitive Ergonomics EPCE 2025 held as part of HCI International 2025 held in Gothenburg Sweden during June 22 27 2025 Two volumes of the HCII 2025 proceedings are dedicated to this year's edition of the EPCE conference The first volume centers around a diverse array of interconnected themes related to human performance workload and situational awareness in the use of complex interactive applications and environments as well as the role of cognitive psychology on designing and evaluating interactive systems

and investigating computer supported as in collaboration and teaming The second volume focuses on issues related to Cognitive Psychology in the demanding contexts of aviation and space

Excellence in Air Show Performers Manolis Karachalios,2025-08-12 This book reveals to readers the secrets and mindsets of air show performances Serving as a sequel to its predecessor Air Show Performers Safety Risk Management and Psychological Factors 9781032556147 it builds upon the insights of the first volume and offers an exploration of what distinguishes exceptional performances amidst the high stakes environment of air shows From looking at the pathways to excellence to the hidden intricacies of resilient safety strategies this book reveals the key approaches to safety and good practice for air show performers This book combines academic research with real world experiences from professionals in the field It dissects the methodologies and practices essential for shaping elite air show performers and takes a critical look at training regimes Technical skill mental resilience and continuous improvement in performance are crucial for success in this field and this book explores resilient safety strategies to ensure that pilot and spectator protection remains paramount in every aspect of an air show performance The reader will not just gain an insight into a pilot s training schedule but also perspectives into mindfulness and the psychological state of those who take part Excellence in Air Show Performers Training for Resilient Safety is a must read for professionals in health and safety aviation and events management seeking to enhance their practices to academics researching the complexities of high risk environments

Glider Flight Instructor Manual Francesco Daniele Padovano,2022-09-16 For decades and in the interests of greater flight safety Competence criteria have been introduced in professional training The results obtained in professional aviation are indisputable and the proposed new paradigm aims to increase the pilot s ability to resolve in particular unfamiliar situations There is no doubt that during soaring the conditions faced are as a general rule highly variable which requires the pilot to be highly adaptable However even though this flying technique is the one that requires the most resilience there is no single criterion in the development of training that would lead the future pilot to develop the necessary skills nor is there a single evaluation criterion that would determine a common standard From my experience in professional teaching in organisations such as CAE the experience as an EASA inspector and my own experience as a gliding instructor I wanted to propose a new way of teaching and above all of assessing a future glider pilot with COMPETENCE criteria in which the elements of CRM and TEM are always present together with the application of KSA In this text I hope that gliding instructors will find a tool for teaching their classes and a greater standardisation as a guide to develop their own Competence Based Training and assessment adapted at the local conditions and gliders The future is not white or black but an infinite scale of greys where different solution could be proposed successfully By this the list of mission proposed is my personal view adapted to my programs but it not pretends to be an absolute criterion Hope you will enjoy Happy landings Francesco Padovano
