Book of Numbers, 1979 **The End of the Book of Numbers** Jordan Davis, 2022-11-10

It has become increasingly clear that Numbers is the litmus test for new ideas relating to the formation of the Pentateuch At the same time the profusion of ideas has only resulted in a corresponding lack of agreement between scholars In the present study Jordan Davis grants significant attention to the geographical references found at the end of the book of Numbers combining archaeological historical and literary critical insights in the attempt to arrive at more verifiable results With a detailed view at the Transjordan conquest traditions Num 21:21-35 24:3-20 and the twin legal narratives relating to Zelophehad's daughters Num 27:36 the author argues for the historical catalysts underlying these traditions and then points to the ideological motivation behind their redactional expansion

The Number Sense of Nineteenth-Century British Literature Stefanie Markovits, 2025-01-12 The Number Sense of Nineteenth Century British Literature considers how the avalanche of printed numbers characterizing the period affected its literature It looks at the influence of a variety of cultural and historical movements such as the rise of statistics and of democratic Liberalism and concurrent developments in mathematics This book takes as its starting point and focus the presence of actual numbers ordinal and cardinal Arabic Roman and spelled out in words within the century's literary texts It is through the deployment of such figures that texts display their number sense similarly readers develop the faculty of number sense by paying careful attention to their presence And contemplation of a text's use of numbers while frequently pointing to specific historical contexts also enables more fundamental recognitions about how literature makes meaning The Number Sense asks what kinds of work intellectual and ethical literature's numerical figures perform Why are some writers especially prone to include numbers What affordances do they wield in various literary environments and against the backdrop of the numbery nineteenth century When do textual numbers really count and when do they ask us to keep count How do they stage contests between the one and the many individuals and collectives How do they relate to formal aspects of works like plot and character narrative and lyric Linger over literary measures illuminates the way numbers help shape texts into the recognizable forms we call genres To that end the book considers the works of poets like Tennyson Wordsworth and Byron and of novelists working in a broad range of genres including Jane Austen George Gissing Charles Dickens Anthony Trollope Lewis Carroll Bram Stoker Wilkie Collins and Thomas Hardy The numbers embedded in their fictions and verse can serve both as valves releasing cultural pressures and as fulcrums places where pressures coincide to create new forms of literary agency

This volume contains chapters from investigators in a range of disciplines with interests in comparative cognition. The studies described characterize the emergence of number-related abilities in rats, pigeons, chimpanzees, and humans, bringing together for the first time in one volume the rich diversity of cognitive capabilities demonstrated throughout many species.
