Cities, Politics & Power Simon Parker, 2010-11-02 Traditionally the study of power in the city was confined to the institutions of urban government and the actors involved in contesting and making political decisions in and for metropolitan societies Increasingly however attention has turned to the function of the city not only as a centre of urban governance but as a major economic social cultural and strategic force in its own right Cities Politics and Power combines this traditional concern with how the cities in which we live are organized and run with a broader focus on cities and urban regions as multiple sites and agents of power This book is divided into five sections with a short introduction outlining the argument and organisation of the text Part two charts the development of the urban polity and considers the ways in which coercion and force continue to be used to segregate oppress and annihilate urban populations Part three critically examines the key collective actors and processes that compete for and organise political power within cities and how urban governance operates and interacts with lesser and greater scales of government and networks of power Part four then explores the ways in which the political is constituted by urban inhabitants

and how social identity information and communication networks and the natural and built environment all comprise intersecting fields of urban power The conclusion calls for a broader theoretical and thematic approach to the study of urban politics This book makes extensive use of comparative and historical case studies providing broad coverage of politics and urban movements in both the Global North and the Global South with a particular focus on the UK USA Canada Latin America and China It is written in an accessible and lucid style and provides suggestions for further reading at the end each chapter

**Scientific Imperialism** Uskali Mäki, Adrian Walsh, Manuela Fernández Pinto, 2017-10-16 The growing body of research on interdisciplinarity has encouraged a more in depth analysis of the relations that hold among academic disciplines In particular the incursion of one scientific

discipline into another discipline's traditional domain also known as scientific imperialism has been a matter of increasing debate. Following this trend, Scientific Imperialism aims to bring together philosophers of science and historians of science interested in the topic of scientific imperialism and in particular interested in the conceptual clarification, empirical identification, and normative assessment of the idea of scientific imperialism. Thus, this innovative volume has two main goals. Indeed, the authors first seek to understand interdisciplinary relations emerging from the incursion of one scientific discipline into one or more other disciplines such as in cases in which the conventions and procedures of one discipline or field are imposed on other fields or more weakly when a scientific discipline seeks to explain phenomena that are traditionally considered proper of another discipline's domain. Secondly, the authors explore ways of distinguishing imperialistic from non-imperialistic interactions between disciplines and research fields. The first sustained study of scientific imperialism, this volume will appeal to postgraduate students and postdoctoral researchers interested in fields such as Science and Technology Studies, Sociology of Science, Technology Philosophy of Science, and History of Science.

Unlike other works in this area, it also gives great consideration to theoretical and methodological discussions. This Handbook will benefit both undergraduate and graduate students eager to understand the sociology of social problems. Color Protocols Carolyn L. Kane, Lida Zeitlin-Wu, 2025-09-30. An edited volume that explores how color intersects with problematic histories of racial encoding in linguistic, visual, and algorithmic media. What is at stake when categories like color, race, and ethnicity are transformed into a common language, lexicon, or industry standard? And more critically, how can we avoid the epistemic and ontological violence that seems inevitable in organizing color into a series of grammars, syntaxes, indexes, and protocols? Color Protocols offers a series of responses to these questions and others. It begins with the premise that color is central to the history of systemic racism and in turn that the encoding of race vis-à-vis color is an intrinsic aspect of chromatic technologies. The book's eighteen curated essays, edited by Carolyn Kane and Lida Zeitlin-Wu, are written by scholars from across the arts, social sciences, and humanities. Each section contains both original essays and republished excerpts fundamental to understanding how the history of color technology and its racialized double valences have played out across multiple fields and media platforms over the last century and a half.
