Case Studies in Polysomnography Interpretation Robert C. Basner, 2012-10-18 The polysomnogram is a formidable sleep medicine tool typically incorporating multiple channels of physiologic data including EEG ECG EMG respiratory flow and effort ventilation via CO2 monitoring oxygen saturation via pulse oximetry and ventilatory treatment modalities Aspiring experts must constantly ask themselves questions regarding PSG interpretation such as Am I confident in using all of these modalities Can I accurately and consistently distinguish a seizure from a movement disorder a servo ventilator signal from an auto titrating continuous positive airway pressure signal an episode of Cheyne Stokes breathing from an episode of obstructive sleep apnea The authors take you into their own sleep laboratories and deliver real life cases for you to interpret with them Such expertise is vitally useful for house staff and fellows learning sleep medicine those seeking Board certification technologists who score PSGs and seasoned sleep clinicians managing patients with sleep related health disorders The print edition includes a CD ROM featuring all images

Using Neurophysiological Signals that Reflect Cognitive or Affective State

Anne-Marie Brouwer, Thorsten O. Zander, Jan B. F. van Erp, 2015-07-27 What can we learn from spontaneously occurring brain and other physiological signals about an individual s cognitive and affective state and how can we make use of this information One line of research that is actively involved with this question is Passive Brain Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative output channel as opposed to more common human output channels like speech and moving the hands However brain signals possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones they can potentially provide continuous online information about an individual s cognitive and affective state without the need of conscious or effortful communication The provided information could be used in a number of ways Examples include monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to errors to correct for a behavioral response While Passive BCIs make use of online neuro physiological responses and close the interaction cycle between a user and a computer system neuro physiological responses can also be used in an offline fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as indicators of mental effort for

optimizing information systems The described field of applied neuro physiology can strongly benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we aimed to publish studies of the highest scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved Connected to the Research Topic was a workshop held on June 6 during the Fifth International Brain Computer Interface Meeting June 3 7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic
