Our Dynamic Earth: A Primer Matthew R. Bennett,2022-01-18 Students taking undergraduate degrees in geography ecology earth science and environmental science frequently take an introductory unit in Physical Geography Some will have not done any geography since their early teens while others have more recent knowledge This range of backgrounds can be challenging for both the instructor and the student this primer aims to help A primer is a readable introduction to a subject more technical than a piece of popular science but less detailed than a specialist textbook It aims to give the reader a platform in a subject with which they may be unfamiliar so that they can proceed simultaneously or sequentially to more advanced texts and information Ideally the primer should have something for those without any knowledge while also challenge and entertaining those who do Not quite bedtime reading but a step in that direction Our Dynamic Earth introduces students to the Earth's origins to plate tectonics atmospheric and oceanographic circulation as well as to a range of Earth surface processes Idea to get you started in your studies

Million Dollar Data: Building Confidence – Vol.1 Stephen DeMeo,2020-07-31 Global warming our current and greatest challenge is without precedent Among the many consequences that are impacting our society one unanticipated concern involves scientific truth When the President of the United States and others in his administration declare that global warming is fake science it calls into question what real science is and what real school science should be I will argue that real science is quality science one that is based on the rigorous collection of reliable and valid data To collect quality data requires bending over backwards to get things right and this is exactly what makes science so special Truth is made when scientists go this extra yard and devise controlled experiments collect large data sets confirm the data and rationally analyze their results Making scientific truth sounds difficult to do in the science laboratory but in reality there are many straightforward ways that truth can be

constructed In the first of two volumes I discuss twelve such ways I call them Confidence Indicators that can allow students to strongly believe in their data and their subsequent results Many of these methods are intuitive and can be used by young students on the late elementary level all the way up to those taking introductory college science courses As in life science is not without doubt In the second volume I introduce the concept of scientific uncertainty and the indicators used to calculate its magnitude I will show that science is about connecting confidence with uncertainty in a specific manner what I refer to as the Confidence Uncertainty Continuum expression This important relationship epitomizes the scientific enterprise as a search for probabilistic rather than absolute truth This two volume set will contain a variety of ways that data quality can be instituted into a science curriculum To support its use many of the examples that I will present involve science teachers as well as student work and feedback from different grade levels and in different scientific disciplines Specific chapters will be devoted to reviewing the academic literature on data quality as well as describing my own personal research on this important but often neglected topic
