Wakeham,Stefan Will,2022-08-05 CRC Press is pleased to introduce the new edition of Commonly Asked Questions in  
Thermodynamics an indispensable resource for those in modern science and engineering disciplines from molecular science  
engineering and biotechnology to astrophysics Fully updated throughout this edition features two new chapters focused on  
energy utilization and biological systems This edition begins by setting out the fundamentals of thermodynamics including its  
basic laws and overarching principles It provides explanations of those principles in an organized manner using questions  
that arise frequently from undergraduates in the classroom as the stimulus These early chapters explore the language of  
thermodynamics the first and second laws statistical mechanical theory measurement of thermodynamic quantities and their  
relationships phase behavior in single and multicomponent systems electrochemistry and chemical and biochemical reaction  
equilibria The later chapters explore applications of these fundamentals to a diverse set of subjects including power  
generation with and without fossil fuels for transport industrial and domestic use heating decarbonization technologies  
energy storage refrigeration environmental pollution and biotechnology Data sources for the properties needed to complete  
thermodynamic evaluations of many processes are included The text is designed for readers to dip into to find an answer to a  
specific question where thermodynamics can provide some if not all of the answers whether in the context of an  
undergraduate course or not Thus its readership extends beyond conventional technical undergraduates to practicing  
engineers and also to the interested lay person who seeks to understand the discourse that surrounds the choice of particular  
technological solutions to current and future energy and material production problems      **NTSE Stage 1 Question Bank -**
