The Development of Evolutionary Genetics Prakash Gorroochurn, 2024-12-28 The book describes the historical development of evolutionary genetics starting from early ideas on evolution and ending with the modern synthesis. It provides an extensive coverage of the history of both evolution and heredity and gives detailed descriptions of the works of Lamarck, Darwin, Mendel, Nageli, Weismann, de Vries, Galton, Pearson, Bateson, Johannsen, Morgan, Fisher, Wright, and Haldane, among many others. The book does not deal only with a description of historical work; it also analyses and critiques existing theories and evolutionary beliefs throughout history and discusses several controversies between biologists.

Illegitimate Children of the Enlightenment C. Alexander McKinley, 2008 The early years of the Third French Republic (1880-1914) saw multiple political factions vying for the legacy of the French Revolution. This book examines one of those factions, the anarchist movement, and the role played by the French Revolution in its political thought and action. The French Revolution became a vital, if not well-recognized, tool of the anarchist movement to popularize and legitimize its revolutionary activity while engaged in a struggle with other political forces of the Republic to claim ownership over the Revolutionary heritage. The anarchists of the Third Republic wrote histories of the Revolution that reflected their own political orientation. They asserted themselves as part of the intellectual tradition of the Enlightenment, which they believed had helped spark the Revolution. The anarchists appropriated the music and popular culture of the French Revolution in their own propaganda. Moreover, they orchestrated revolutionary action and political theatre on the day most associated with the Revolution, July 14. In the Revolution, the anarchists saw glimmers of hope, precursors to their own movement, as well as an effective means to present their message to a wider audience, as they also offered models for others to imitate.

Variants of Evolutionary Algorithms for Real-World Applications Raymond Chiong, Thomas Weise, Zbigniew Michalewicz, 2011-11-13 Evolutionary Algorithms (EAs) are population-based stochastic search algorithms that mimic natural evolution. Due to their ability to find excellent solutions for conventionally hard and dynamic problems within acceptable time, EAs have attracted interest from many researchers and practitioners in recent years. This book, *Variants of Evolutionary Algorithms for Real-World Applications*, aims to promote the practitioner's view on EAs by providing a comprehensive discussion of how EAs can be adapted to the requirements of various applications in the real-world domains. It comprises 14 chapters, including an introductory chapter revisiting the fundamental question of what an EA is, and other chapters addressing a range of real-world problems such as production process planning, inventory system, and supply chain network optimisation, task-based jobs assignment, planning for CNC-based work-piece construction, mechanical ship design tasks, that

involve runtime intense simulations data mining for the prediction of soil properties automated tissue classification for MRI images and database query optimisation among others These chapters demonstrate how different types of problems can be successfully solved using variants of EAs and how the solution approaches are constructed in a way that can be understood and reproduced with little prior knowledge on optimisation
