Hotwire Native for Rails Developers Joe Masilotti,2015-09-23 Create intuitive and maintainable mobile apps powered by the technology you already know Ruby on Rails Add Hotwire Native to your new or existing Rails app and start creating native iOS and Android applications You ll learn how to enhance your apps progressively adding native components and screens Bring your existing or new web apps to a much wider mobile audience and make the app look and feel native to their platform You know how to create a great web app using Rails But how do you also create native apps for iOS and Android when you don t want to reimplement everything in Swift and Kotlin Fully native iOS and Android apps are expensive to build and even more expensive to maintain And of course you have to deal with the app stores Hotwire Native builds hybrid mobile apps by rendering HTML directly from your Rails server Build your screens once and deploy across web iOS and Android simultaneously No repackaging apps or resubmitting to app stores You ll build a hiking tracker app on iOS and Android Start by creating a bare bones app and build new features into it with each new chapter Set up remote path configuration to navigate gracefully and route forms efficiently Determine when it makes sense to upgrade your screens to native Build native

components and screens to enhance the apps progressively with full access to iOS and Android SDKs and APIs such as push notifications and native maps And deploy to physical devices for beta testing You ll drive the content and behavior of your apps directly from the server without changing any native code And you ll keep your business logic in one place making your apps more resilient to future changes and easier to maintain Along the way you ll learn just enough Swift and Kotlin to confidently build functional user friendly mobile apps What You Need macOS with Ruby 3 4 2 SQLite Xcode 16 and Android Studio Meerkat
