book contains a selection of papers presented at the 16th AISEM Associazione Italiana Sensori e Microsistemi National Conference on Sensors and Microsystems held in Rome 7-9 February 2011. The conference highlighted updated results from both theoretical and applied research in the field of sensors and microsystems. This book presents material in an interdisciplinary approach covering many aspects of the disciplines related to sensors and microsystems including physics, chemistry, materials science, biology, and applications.

Intelligent Systems and Applications Kohei Arai, 2022-08-30. This book is a remarkable collection of chapters covering a wide domain of topics related to artificial intelligence and its applications to the real world. The conference attracted a total of 494 submissions from many academic, pioneering researchers, scientists, industrial engineers, and students from all around the world. These submissions underwent a double-blind peer-reviewed process. Of the total submissions, 176 submissions have been selected to be included in these proceedings. It is difficult to imagine how artificial intelligence has become an inseparable part of our life. From mobile phones, smart watches, washing machines, to smart homes, smart cars, and smart industries, artificial intelligence has helped to revolutionize the whole globe. As we witness exponential growth of computational intelligence in several directions and use of intelligent systems in everyday applications, this book is an ideal resource for reporting latest innovations and future of AI. Distinguished researchers have made valuable studies to understand the various bottlenecks existing in different arenas and how they can be overcome with the use of intelligent systems. This book also provides new directions and dimensions of future research work. We hope that readers find the volume interesting and valuable.

Developing Novel Spinning Methods to Fabricate Continuous Multifunctional Fibres for Bioapplications Azadeh Mirabedini, 2018-07-23. This book describes the development of three-dimensional electroactive fibres using a novel coaxial wet spinning approach from organic conductors in combination with non-conducting hydrogel polymers. This book also presents the characterization and evaluation of multi-axial biofibres in terms of mechanical, physical, electrochemical, and biological properties and explores their use in a diverse range of applications including implantable electrodes, drug delivery systems, and energy storage systems. In the first chapter, the author highlights the significance of engineering three-dimensional fibres, introduces the involved hydrogels and organic conductors with emphasis on their biomedical application, and collects some of the previously established methods for fabrication of biofibres. In the second chapter, particular attention is given to the overall experimental fabrication methods and characterization analyses conducted in the work. Chapters three to five present the main findings of this work, in which readers will discover how novel hybrid hydrogel fibres with an inner core of chitosan and alginate were prepared and characterized, how graphene was incorporated into coaxial wet-spun biofibres, and how one-dimensional tri-axial fibres were developed using a novel coaxial wet spinning fibre production method and applied as potential battery devices. In the final chapter of this work, the author summarizes the main achievements of the work and outlines some recommendations for future research.
