Agrobiodiversity Conservation And Economic Development Routledge Explorations In Environmental Economics:

Agrobiodiversity Conservation and Economic Development Andreas Kontoleon, Unai Pascual, Melinda Smale, 2008-10-03

This book reflects current developments in the economics of agrobiodiversity and focuses its attention on the role agrobiodiversity can have for economic development As a new and rapidly expanding subfield at the interface of environmental ecological agricultural and development economics the editors and contributors to this volume provide a thorough structured and authoritative coverage of this field Topics covered include the economic modelling of agrobiodiversity policy and governance solutions for the conservation of biodiversity in agricultural landscapes contracts markets and valuation The authors include well known and respected academics and researchers who have a real policy perspective into the role of agrobiodiversity and economic development The book provides coherent and up to date coverage of the economics of in situ agrobiodiversity conservation which is to a large extent currently absent Though the material in the volume is primarily written for economists its content and style are highly relevant and accessible to ecologists and conservation biologists and to academics from other broad disciplines that are located within the areas of economics and ecology

Agrobiodiversity Conservation and Economic Development Andreas Kontoleon, Unai Pascual, Melinda Smale, 2008-10-03 Pt 1 Policy perspectives pt 2 Multiple objectives trade offs and synergies between productivity and agrobiodiversity pt 3 Market and non market institutions for agrobiodiversity conservation *Environmental Amenities and Regional Economic Development* Todd L. Cherry, Dan Rickman, 2009-12-04 Rising U S income and wealth in recent decades have fueled an increase in consumption demand for environmental amenities Many observers and researchers have argued that this at least in part underlies current differentials in economic growth across regions This collection of key articles addresses the issues and more

The Ethics and Politics of Environmental Cost-Benefit Analysis Karine Nyborg, 2012-05-31 Putting a price tag on the environment is controversial This book discusses ethical and political aspects of environmental cost benefit analysis why controversies must be expected why they should be taken seriously and how they can be handled in practice Cost benefit analysis is commonly thought of as a method for ranking projects according to their contributions to social welfare The starting point of the present book is different Rather than providing a final ranking the purpose of a project analysis is to enable participants in a democratic decision making process to make their own well founded rankings of projects according to their own normative views Since ethical and political views differ the analysis should be useful as factual background for any reasonable social welfare judgement This purpose faces the analyst with quite different challenges than the purpose of ranking projects The argument of the book is based on economic theory but with a strong emphasis on readability and applicability It is aimed at those economists and non economists alike who use or are faced with cost benefit analysis and environmental valuation in their work politicians employees of ministries and regulatory agencies students journalists consultants and researchers No particular prior knowledge of economics is required **What**

do we know about the future of food systems? Wiebe, Keith D.,Gotor, Elisabetta,2025-07-21 Food systems have achieved remarkable progress in recent decades but moving forward they will face significant challenges in delivering the many outputs and services we expect and need This book presents a collection of short chapters on the current state of knowledge about different aspects of the future of food systems written by a diverse group of scientists from around the world with expertise in a wide range of related disciplines and regions Each chapter examines a particular aspect of food systems describes recent trends and challenges that highlight the importance of the topic summarizes the latest available foresight research on that topic and identifies key gaps in existing foresight research that merit further attention In a world of complexity and uncertainty the goal of this book and the purpose of foresight analysis more generally is not to predict the future with precision but rather to carefully consider and present what can be known about possible future pathways in order to inform choices today The collection includes 15 chapters focused on major drivers and impacts of change in food systems 11 chapters that provide regional and national perspectives on the future of food systems 7 chapters on the future of major food commodities and 3 chapters on food systems measurement and modeling tools The contributors come from across CGIAR and many other partner research institutions around the world This collection was begun as part of the CGIAR Research Initiative on Foresight during the 2022-2024 period and completed as part of the ongoing area of work on foresight and prioritization under the CGIAR Science Program on Policy Innovations The Cooperation Challenge of Economics and the Protection of Water Supplies Joan Hoffman,2010-04-05 In this book Joan Hoffman examines the watershed collaboration from an economic perspective as well as the possibility of alternative means of water protection such as regulation The case is examined in the light of similar collaborations elsewhere in the world **Environmental Efficiency, Innovation and Economic Performances** Anna Montini,Massimiliano Mazzanti,2010-07-02 This volume brings together microeconomics studies on firms eco and economic performance both in the industrial and service sector by considering a sector based perspective rooted mainly in the exploitation of NAMEA data at regional level and a macroeconomic analysis of the environment income and welfare **Conservation of Tropical Plant Species** M.N. Normah,H.F. Chin,Barbara M. Reed,2012-08-04 The book is designed to provide a review on the methods and current status of conservation of the tropical plant species It will also provide the information on the richness of the tropical plant diversity the need to conserve and the potential utilization of the genetic resources Future perspectives of conservation of tropical species will be discussed Besides being useful to researchers and graduate students in the field we hope to create a reference for a much wider audience who are interested in conservation of tropical plant diversity **Optimal Control of Age-structured Populations in Economy, Demography, and the Environment** Raouf Boucekkine,Natali Hritonenko,Yuri Yatsenko,2013-05-13 This book covers a wide range of topics within mathematical modelling and the optimization of economic demographic technological and environmental phenomena Each chapter is written by experts in their field and represents new advances in modelling

theory and practice These essays are exemplary of the fruitful interaction between theory and practice when exploring global and local changes The unifying theme of the book is the use of mathematical models and optimization methods to describe age structured populations in economy demography technological change and the environment Emphasis is placed on deterministic dynamic models that take age or size structures delay effects and non standard decision variables into account In addition the contributions deal with the age structure of assets resources and populations under study Interdisciplinary modelling has enormous potential for discovering new insights in global and regional development Optimal Control of Age structured Populations in Economy Demography and the Environment is a rich and excellent source of information on state of the art modelling expertise and references The book provides the necessary mathematical background for readers from different areas such as applied sciences management sciences and operations research which helps guide the development of practical models As well as this the book also surveys the current practice in applied modelling and looks at new research areas for a general mathematical audience This book will be of interest primarily to researchers postgraduate students as well as a wider scientific community including those focussing on the subjects of applied mathematics environmental sciences economics demography management and operations research

New Perspectives on Agri-environmental Policies Stephan J Goetz, Floor Brouwer, 2009-10-20 Significant advances have occurred in recent years in Europe and in North America in addressing agri environmental policies but whilst important institutional and legal differences still exist between the two continents the sharing of recent scientific advances will benefit scientists on both sides of the Atlantic This is the main purpose of this book

The Economics of Biodiversity and Ecosystem Services Shunsuke Managi, 2012 First Published in 2012 Routledge is an imprint of Taylor Francis an informa company

Forests and Development Philippe Delacote, 2012-04-27 This book is a fully up to date study of the major issues facing forest conservation and the forestry industry which considers developments at local national and global levels Environmental and development topics relating to each level are discussed for instance the use of forest products in a rural poverty context corruption and forest harvesting and consumption as a political device Delacote employs a quantitative approach in order to analyse the plight of tropical forests in the developing world and in doing so produces a range of interesting conclusions This methodology fills a crucial research gap in existing studies of forests in a development context increased use of theoretical tools to interpret real life situations might be beneficial to the field Therefore the first objective of this book is to provide a sample of theoretical analysis concerning the forests and development nexus The second objective is to supply empirical economists with new theoretical insights with the hope that those results can emerge with conclusive field testing and relevant policy recommendations

Biotechnology and Agricultural Development Rob Tripp, 2009-06-02 The controversy over genetically modified GM crops in industrialized countries is paralleled by a loud debate over their potential role in developing countries with supporters claiming that GM crops are the best hope for reducing rural poverty and hunger and opponents predicting

that they can only bring corporate control of peasant agriculture and environmental disaster This book offers an examination of the performance of the new technology in the broader context of the agricultural institutions that govern its generation

The Role of Science for Conservation Matthias Wolff, Mark Gardener, 2012-12-12 The book integrates the knowledge and reflections of 30 scientists of which many have dedicated a substantial part of their professional life to the Galapagos archipelago to the conservation of its biodiversity and to the sustainable management of its resources The book can be considered a milestone on the way to the successful conservation and sustainable development of this unique world heritage site

Valuation of Regulating Services of Ecosystems Pushpam Kumar, Michael D. Wood, 2010-07-13 The valuation of regulating services is an evolving field of ecological economics In this book Professor Pushpam Kumar and Professor Michael D Wood have invited some of the foremost international experts in the field of ecosystem services valuation to contribute chapters on the valuation of regulating services and highlight some of the main obstacles to the implementation and acceptance of these methodologies in the context of decision making

Oligopoly, the Environment and Natural Resources Luca Lambertini, 2013-08-21 Industrial production and consumption patterns rely heavily on the intensive use of both renewable and non renewable resources and the consequences for the environment can be serious Following a long period of time where the profit incentives of firms have prevailed over preservation of the environment and the world's natural resources a new consensus has emerged concerning the need to regulate firm behaviour aimed at ensuring the sustainability of the economic system in the long run This book offers an exhaustive overview of current economic debate about these topics taking modern oligopoly theory as a benchmark The first part of the book covers static models dealing with incentives for green research and development Pigovian taxation cartels environmental quality and international trade as well as the role of corporate social responsibility public firms and consumer environmental awareness as endogenous regulatory instruments Then the author moves on to examine the role of time while drawing from optimal control and differential game theory This opens the way to the discussion of fair discount rates to ensure the welfare of future generations as well as the long run sustainability of production and consumption patterns

Preference Data for Environmental Valuation John Whitehead, Tim Haab, Ju-Chin Huang, 2012-03-15 The monetary valuation of environmental goods and services has evolved from a fringe field of study in the late 1970s and early 1980s to a primary focus of environmental economists over the past decade Despite its rapid growth practitioners of valuation techniques often find themselves defending their practices to both users of the results of applied studies and perhaps more troubling to other practitioners One of the more heated threads of this internal debate over valuation techniques revolves around the types of data to use in performing a valuation study In the infant years of the development of valuation techniques two schools of thought emerged the revealed preference school and the stated preference school the latter of which is perhaps most associated with the contingent valuation method In the midst of this debate an exciting new approach to non market valuation was developed in the 1990s a combination and joint

estimation of revealed preference and stated preference data There are two primary objectives for this book One objective is to fill a gap in the nonmarket valuation primer literature A number of books have appeared over the past decade that develop the theory and methods of nonmarket valuation but each takes an individual nonmarket valuation method approach This book considers each of these valuation methods in combination with another method These relationships can be exploited econometrically to obtain more valid and reliable estimates of willingness to pay relative to the individual methods The second objective is to showcase recent and novel applications of data combination and joint estimation via a set of original state of the art studies that are contributed by leading researchers in the field This book will be accessible to economists and consultants working in business or government as well as an invaluable resource for researchers and students alike

Carbon Markets or Climate Finance? Axel Michaelowa, 2012-01-16 This book builds on a decade long experience with mechanisms provided by the Kyoto Protocol and the UN Framework Convention on Climate Change It discusses the challenges of climate finance in the context of the post Copenhagen negotiations and provides a long term outlook of how climate finance in developing countries could develop Written by climate finance experts from academia carbon finance businesses and international organisations the book provides background firsthand insights case studies and analysis into the complex subject area of climate finance

Government and the Environment Laura Castellucci, 2014-06-13 In the today's global commercial society an inquiry into the economic role of government is gaining momentum Many crucial goods for the wellbeing of a society are not commercial national security and clean air are great examples This means that the economic role of government is not limited to cure the so called market failures but it has to provide for non commercial goods Unfortunately in the last few decades the decline of the political economic culture of western post industrial societies has left scope for people to blindly believe in a free deregulated market This book brings the culture of the state in from the cold by confronting readers at the start with the necessity of recognizing the fundamental difference between private commercial interests whose provision rests on the culture of profit and public shared interests whose provision rests on the culture of the state This book also explores how much individual wellbeing does depend on both The only chance for public shared interests with their non profit nature to successfully keep their ground in the face of the overwhelming power of private commercial financial interests lies in regenerating a political economic state culture whereby governments and policy makers politicians understand their responsibility and social function to consist primarily in pursuing the satisfaction of the formers and not in acting on behalf of the latter

The Future of Helium as a Natural Resource William Nuttall, Richard Clarke, Bartek Glowacki, 2012-06-25 The book reveals the changing dynamics of the helium industry on both the supply side and the demand side The helium industry has a long term future and this important gas will have a role to play for many decades to come Major new users of helium are expected to enter the market especially in nuclear energy both fission and fusion Prices and volumes supplied and expected to rise and this will prompt greater efforts towards the development of new helium sources

and helium conservation and recycling
