Approximations And Endomorphism Algebras Of Modules

Approximations and Endomorphism Algebras of Modules Rüdiger Göbel, Jan Trlifaj, 2012-10-01 This second revised and substantially extended edition of *Approximations and Endomorphism Algebras of Modules* reflects both the depth and the width of recent developments in the area since the first edition appeared in 2006 The new division of the monograph into two volumes roughly corresponds to its two central topics approximation theory Volume 1 and realization theorems for modules Volume 2 It is a widely accepted fact that the category of all modules over a general associative ring is too complex to admit classification Unless the ring is of finite representation type we must limit attempts at classification to some restricted subcategories of modules The wild character of the category of all modules or of one of its subcategories C is often indicated by the presence of a realization theorem that is by the fact that any reasonable algebra is isomorphic to the endomorphism algebra of a module from C This results in the existence of pathological direct sum decompositions and these are generally viewed as obstacles to classification In order to overcome this problem the approximation theory of modules has been developed The idea here is to select suitable subcategories C whose modules can be classified and then to approximate arbitrary modules by those from C These approximations are neither unique nor functorial in general but there is a rich supply available appropriate to the requirements of various particular applications The authors bring the two theories together The first volume *Approximations* sets the scene in Part I by introducing the main classes of modules relevant here the S complete pure injective Mittag Leffler and slender modules Parts II and III of the first volume develop the key methods of approximation theory Some of the recent applications to the structure of modules are also presented here notably for tilting cotilting Baer and Mittag Leffler modules In the second volume *Predictions* further basic instruments are introduced the prediction principles and their applications to proving realization theorems Moreover tools are developed there for answering problems motivated in algebraic topology The authors concentrate on the impossibility of classification for modules over general rings The wild character of many categories C of modules is documented here by the realization theorems that represent critical R algebras over commutative rings R as endomorphism algebras of modules from C The monograph starts from basic facts and gradually develops the theory towards its present frontiers It is suitable both for graduate students interested in algebra and for experts in module and representation theory

Approximations and Endomorphism Algebras of Modules: Predictions Rüdiger Göbel, Jan Trlifaj, 2012 This monograph now in its second revised and extended edition provides a thorough treatment of module theory a subfield of algebra The authors develop an approximation theory as well as realization theorems and present some of its recent applications notably to infinite dimensional combinatorics and model theory The book starts from basic facts and gradually develops the theory towards its present frontiers It is suitable both for graduate students interested in algebra and for experts in module and representation

and practitioners Products of Finite Groups Adolfo Ballester-Bolinches, Ramon Esteban-Romero, Mohamed Asaad, 2010-10-19 The study of finite groups factorised as a product of two or more subgroups has become a subject of great interest during the last years with applications not only in group theory but also in other areas like cryptography and coding theory It has experienced a big impulse with the introduction of some permutability conditions The aim of this book is to gather order and examine part of this material including the latest advances made give some new approach to some topics and present some new subjects of research in the theory of finite factorised groups Some of the topics covered by this book include groups whose subnormal subgroups are normal permutable or Sylow permutable products of nilpotent groups and an exhaustive structural study of totally and mutually permutable products of finite groups and their relation with classes of groups This monograph is mainly addressed to graduate students and senior researchers interested in the study of products and permutability of finite groups A background in finite group theory and a basic knowledge of representation theory and classes of groups is recommended to follow it Abelian Groups László Fuchs, 2015-12-12 Written by one of the subject's foremost experts this book focuses on the central developments and modern methods of the advanced theory of abelian groups while remaining accessible as an introduction and reference to the non specialist It provides a coherent source for results scattered throughout the research literature with lots of new proofs The presentation highlights major trends that have radically changed the modern character of the subject in particular the use of homological methods in the structure theory of various classes of abelian groups and the use of advanced set theoretical methods in the study of undecidability problems The treatment of the latter trend includes Shelah's seminal work on the undecidability in ZFC of Whitehead's Problem while the treatment of the former trend includes an extensive but non exhaustive study of p groups torsion free groups mixed groups and important classes of groups arising from ring theory To prepare the reader to tackle these topics the book reviews the fundamentals of abelian group theory and provides some background material from category theory set theory topology and homological algebra An abundance of exercises are included to test the reader's comprehension and to explore noteworthy extensions and related sidelines of the main topics A list of open problems and questions in each chapter invite the reader to take an active part in the subject's further development Representation Theory and Beyond Jan Šťovíček, Jan Trlifaj, 2020-11-13 This volume contains the proceedings of the Workshop and 18th International Conference on Representations of Algebras ICRA 2018 held from August 8-17 2018 in Prague Czech Republic It presents several themes of contemporary representation theory together with some new tools such as stable categories stable derivators and contramodules In the first part expanded lecture notes of four courses delivered at the workshop are presented covering the representation theory of finite sets with correspondences geometric theory of quiver Grassmannians recent applications of contramodules to tilting theory as well as symmetries in the representation theory over an abstract stable homotopy theory The second part consists of six more advanced papers based on plenary talks of the conference presenting selected topics
