Aashto Roadway Lighting Design Guide:

Roadway Lighting Design Guide American Association of State Highway and Transportation Officials, 2005 This guide replaces the 1984 publication entitled An Informational Guide for Roadway Lighting It has been revised and brought up to date to reflect current practices in roadway lighting The guide provides a general overview of lighting systems from the point of view of the transportation departments and recommends minimum levels of quality The guide incorporates the illuminance and luminance design methods but does not include the small target visibility STV method Technical Manual for Design and Construction of Road Tunnels--civil Elements, 2010 The increased use of underground space for transportation systems and the increasing complexity and constraints of constructing and maintaining above ground transportation infrastructure have prompted the need to develop this technical manual This FHWA manual is intended to be a single source technical manual providing guidelines for planning design construction and rehabilitation of road tunnels and encompasses various types of road tunnels P ix **Roadway Lighting Handbook** United States. Bhagavathula, Don McLean (Lighting designer), 2020 The lighting industry has changed dramatically over the past decade. The optical system design of legacy high intensity discharge HID luminaires was restricted to the lamp refractor and reflector design which had limits in the distribution of the light controls and adaptability. Roadway luminaires have moved beyond this design methodology to include the vast possibilities presented by solid state lighting (SSL). At present in the form of light emitting diodes (LED), SSL uses lower energy, reduces maintenance, improves color, and can be easily dimmed and controlled. The TRB National Cooperative Highway Research Program's NCHRP Research Report 940 Solid State Roadway Lighting Design Guide Volume 1 Guidance develops more comprehensive guidelines in American Association of State Highway Transportation Officials (AASHTO) standard format for the application of roadway lighting related to the widespread adoption of SSL and identifies gaps in knowledge where possible future research will enhance these guidelines. Also see this guide's accompanying report NCHRP Research Report 940 Solid State Roadway Lighting Design Guide Volume 2 Research Overview.

Road Lighting Wout van Bommel, 2014-11-21 This book outlines the underlying principles on which modern road lighting is based and provides the reader with knowledge of how these principles should be applied in practice. This book offers a completely fresh approach to the subject, reflecting how the technology of road lighting has progressed to keep up with the changes in lamp technology, especially in solid state light sources, and the increasing awareness of energy use and environmental issues. The book is divided into three parts. Part One describes lighting of open roads with chapters discussing visual performance and comfort, including the effects of mesopic vision and age, and international standards and recommendations for road lighting. Lighting equipment is introduced specifically, lamps and luminaires in terms of their practical properties and features, but also the road surface and its characteristics. A chapter on Lighting Design makes the link between theory and practice, providing the reader with the knowledge needed for effective lighting design, including aspects relating to sustainability. The final chapter of Part One deals with lighting calculation conventions and measurements. Part Two is devoted to light pollution. The negative consequences of light pollution are described, and tactics to restrict light pollution explained. Lighting criteria are defined that can be used by the lighting designer to guarantee installations stay within acceptable limits. International standards and recommendations on the restriction of light pollution are discussed. Part Three is devoted to tunnel lighting, with chapters discussing visual performance in tunnel environments, lighting criteria, standards and recommendations, and concluding with a chapter on tunnel lighting equipment and design. This book is a valuable resource for road lighting designers and engineers, students of lighting design and engineering, town planners, traffic engineers, environmental specialists, and lamp and luminaire developers and manufacturers.

Managing Selected Transportation Assets Michael J. Markow, National Cooperative Highway Research Program, 2007 NCHRP synthesis 371 explores the state of the practice for managing transportation infrastructure assets other than pavements and bridges and documents gaps in knowledge and areas in need of potential further study.
