Chen, 2011-08-04 An unprecedented look into the basic physics chemistry and technology behind the LCD Most notably used for computer screens televisions and mobile phones LCDs liquid crystal displays are a pervasive and increasingly indispensable part of our lives Providing both an historical and a business minded context this extensive resource describes the unique scientific and engineering techniques used to create these beautiful clever and eminently useful devices In this book the history of the science and technology behind the LCD is described in a prelude to the development of the device presenting a rational development theme and pinpointing innovations The book begins with Maxwell s theory of electromagnetism and the ultimately profound realization that light is an electromagnetic wave and an electromagnetic wave is light The power of mathematical physics thus was brought to bear upon the study of light and particularly the polarization of light by material bodies including liquid crystals After a brief historical description of polarization a physical interpretation

provides substance to the mathematical concepts Subsequent chapters cover Thermodynamics for liquid crystals The Maier Saupe mean field phenomenological static continuum and dynamic continuum theories The transistor and integrated circuit Glass panels and modules The calculus of variations The active matrix Semiconductor fabrication The global LCD business Additionally the book illustrates how mathematics physics and chemistry are put to practical use in the LCDs we use every day By describing the science from an historical perspective and in practical terms in the context of a device very familiar to readers the book presents an engaging and unique view of the technology for everyone from science students to engineers product designers and indeed anyone curious about LCDs Series Editor Anthony C Lowe The Lambert Consultancy Braishfield UK The Society for Information Display SID is an international society which has the aim of encouraging the development of all aspects of the field of information display Complementary to the aims of the society the Wiley SID series is intended to explain the latest developments in information display technology at a professional level The broad scope of the series addresses all facets of information displays from technical aspects through systems and prototypes to standards and ergonomics
