Information Technology and Intelligent Transportation Systems L. C. Jain, X. Zhao, V. E. Balas, 2020-03-18. Intelligent transport systems from basic management systems to more application oriented systems vary in the technologies they apply. Information technologies including wireless communication are important in intelligent transportation systems as are computational technologies. Floating car data, floating cellular data, sensing technologies, and video vehicle detection. Theoretical and application technologies such as emergency vehicle notification systems, automatic road enforcement, and collision avoidance systems as well as some cooperative systems are also used in intelligent transportation systems. This book presents papers selected from the 128 submissions in the field of information technology and intelligent transportation systems received from 5 countries. In December 2019, Chang'an University organized a round table meeting to discuss and score the technical merits of each selected paper, of which 23 are included in this book. Providing a current overview of the subject, the book will be of interest to all those working in the field of intelligent transportation systems and traffic management.

Intelligent Transport Systems for Everyone's Mobility Tsunenori Mine, Akira Fukuda, Shigemi Ishida, 2019-07-17. This book presents the latest most interesting research efforts regarding Intelligent Transport System (ITS) technologies from theory to practice. The book's main theme is Mobility for everyone by ITS; accordingly, it gathers a range of contributions on human centered factors in the use or development of ITS technologies, infrastructures, and applications. Each of these contributions proposes a novel method for ITS and discusses the method on the basis of case studies conducted in the Asia Pacific region. The book is roughly divided into four general categories: 1. Safe and Secure Society, 2. ITS Based Smart Mobility, 3. Next Generation Mobility, and 4. Infrastructure Technologies for Practical ITS. In these categories, several key topics are touched on with each other, such as driver assistance and behavior analysis, traffic accident and congestion management, vehicle flow management at large events, automated or self-driving vehicles, V2X technologies, next generation public transportation systems, and intelligent transportation systems made possible by big data analysis. In addition, important current and future ITS related problems are discussed, taking into account many case studies that have been conducted in this regard.

Intelligent Road Transport Systems Yunpeng WANG, Xinping YAN, Guangquan LU, Chaozhong WU, 2022-05-17. In recent years, the application of intelligent transportation systems (ITS) has steadily expanded and has become a hot spot of common interest to universities, scientific research institutes, enterprises, and institutions in the transportation field. ITS is the product of the deep integration of modern high tech in the transportation industry, and its development has accompanied that of modern high tech. ITS is now also becoming part of the Internet of Things (IoT) and is expected to contribute significantly to making our cities smarter and

connecting with other infrastructure Although there are many monographs and textbooks on intelligent transportation with the advancement of technology and changes in demand the key technologies of ITS are also rapidly changing This book chiefly focuses on the main technologies of ITS examining them from four perspectives sense perception and management of traffic information chapters 2 3 transmission interaction of traffic information chapter 4 prediction prediction of traffic states chapter 6 and application intelligent transportation applications chapters 6 through 10 Given its scope the book can be used as a textbook for undergraduates or graduates as well as a reference book for research institutes and enterprises This book emphasizes the use of basic traffic engineering principles and state of art methodologies to develop functional designs It largely reflects the authors own experience in adapting these methodologies to ITS design For example the book addresses various forms of data collection models used to predict and evaluate traffic states comprehensive description in connected vehicles applications for users and traffic managers etc The knowledge gained here will allow designers to estimate the performance differences among alternatives and gauge their potential benefits for functional design purposes To gain the most from the book readers should be somewhat familiar with the field of traffic engineering and interested in ITS
