

Writing Equations of Lines Practice Worksheet B

Name _____

Class Period _____

Find the slope and the y-intercept, and then write the equation of the line.

Find slope. $m = \frac{y_2 - y_1}{x_2 - x_1}$	Find the y-intercept: Solve for b $y = mx + b$	Write the equation $y = mx + b$
1. (1, 5) and (2, 7) $m =$	$\frac{2}{1} = 2$ $5 = 2(1) + b$ $b = 3$	$y = mx + b$ $y = 2x + 3$
2. (0, 1) and (3, -8) $m =$	$\frac{-9}{3} = -3$ $1 = -3(0) + b$ $b = 1$	$y = mx + b$ $y = -3x + 1$
3. (2, -3) and (4, -2) $m =$	$\frac{-1}{-2} = \frac{1}{2}$ $-2 = \frac{1}{2}(4) + b$ $-2 = 2 + b$ $b = -4$	$y = mx + b$ $y = \frac{1}{2}x - 4$
4. (2, 5) and (4, 2) $m =$	$\frac{-3}{2}$ 2 = -3/2(4) + b $2 = -6 + b$ $b = 8$	$y = mx + b$ $y = -\frac{3}{2}x + 8$
5. (-3, -5) and (-1, 3) $m =$	$\frac{8}{2} = 4$ $3 = 4(-1) + b$ $3 = -4 + b$ $b = 7$	$y = mx + b$ $y = 4x + 7$

Reviews in Graph Theory William G. Brown,1980 **Linear Equations, Inequalities, and Functions** Wendy Lawson,Nguyen Nghi H.,2005 Supplemental math textbook for high school students with innovative features shortcuts in solving linear equations and inequalities innovative techniques in solving by number line innovative approaches in solving by graphing using graphing calculators *Do the Math* Suzanne Bower,2012-11-19 Elementary Algebra writing solving graphing linear equations in two variables *Core Focus on Linear Equations* McCaw,2014-08-01 **Linear equations** Paul M. Cohn,1967 Linear Equations and Lines Leon J. Ablon,1981 **Understanding the Use of Linear Functions** Cara E. West,2017 Linear functions are addressed in Eighth Grade Mathematics class all through Algebra II in the State of Oklahoma s Standards It does not go away after Algebra II as it is reviewed in Pre Calculus Trigonometry and Calculus Lines are everywhere in the world On paper we use lines to write letters On roads we use lines for safety On street signs we use lines to show lanes or road steepness On products we purchase at the store lines are in labeling and nutritional information On clothing we use lines to help in cutting the fabric as well as designs Even in our homes we use lines to make frames level and plum Lines are also used in the formation of polygons In this unit students will learn how to identify linear functions graph linear functions and analyze linear relationships Students are taught the three forms of linear equations and expected to understand how to translate between them The skills learned in this unit will be a strong foundation for future learning by the students Core Focus on Linear Equations Shannon McCaw,2012-08-15 **Solving Linear and Non-linear Equations** Chris Woodford,1992 *Functional Equations and How to Solve Them* Christopher G. Small,2007-04-03 Over the years a number of books have been written on the theory of functional equations However very little has been published which helps readers to solve functional equations in mathematics competitions and mathematical problem solving This book fills that gap The student who encounters a functional equation on a mathematics contest will need to investigate solutions to the equation by finding all solutions or by showing that all solutions have a particular property The emphasis here will be on the development of those tools which are most useful in assigning a family of solutions to each functional equation in explicit form At the end of each chapter readers will find a list of problems associated with the material in that chapter The problems vary greatly with the easiest problems being accessible to any high school student who has read the chapter carefully The most difficult problems will be a reasonable challenge to advanced students studying for the International Mathematical Olympiad at the high school level or the William Lowell Putnam Competition for university undergraduates The book ends with an appendix containing topics that provide a springboard for further investigation of the concepts of limits infinite series and continuity Linear Equations Paul Moritz Cohn,1967 **Do the Math** Suzanne Bower,2012-11-19 Applications of linear equations in one variable number problems age problems mixture problems money problems motion problems *An Introduction to G-Functions* Bernard Dwork,Giovanni Gerotto,Francis J. Sullivan,2016-03-02 Written for advanced

undergraduate and first year graduate students this book aims to introduce students to a serious level of p -adic analysis with important implications for number theory. The main object is the study of G -series that is power series $y = \sum_{j=0}^{\infty} a_j x^j$ with coefficients in an algebraic number field K . These series satisfy a linear differential equation $Ly = 0$ with $L \in K[x, d/dx]$ and have non-zero radii of convergence for each imbedding of K into the complex numbers. They have the further property that the common denominators of the first s coefficients go to infinity geometrically with the index s . After presenting a review of valuation theory and elementary p -adic analysis together with an application to the congruence zeta function this book offers a detailed study of the p -adic properties of formal power series solutions of linear differential equations. In particular the p -adic radii of convergence and the p -adic growth of coefficients are studied. Recent work of Christol, Bombieri, Andr and Dwork is treated and augmented. The book concludes with Chudnovsky's theorem: the analytic continuation of a G -series is again a G -series. This book will be indispensable for those wishing to study the work of Bombieri and Andr on global relations and for the study of the arithmetic properties of solutions of ordinary differential equations. Linear Integral Equations Ram P.

Kanwal, 1971 Linear Integral Equations William Vernon Lovitt, 1924 *Linear Integral Equations* Ram P.

Kanwal, 2014-02-23 This second edition of *Linear Integral Equations* continues the emphasis that the first edition placed on applications. Indeed many more examples have been added throughout the text. Significant new material has been added in Chapters 6 and 8. For instance in Chapter 8 we have included the solutions of the Cauchy type integral equations on the real line. Also there is a section on integral equations with a logarithmic kernel. The bibliography at the end of the book has been extended and brought up to date. I wish to thank Professor B. K. Sachdeva who has checked the revised manuscript and has suggested many improvements. Last but not least I am grateful to the editor and staff of Birkhauser for inviting me to prepare this new edition and for their support in preparing it for publication. Ram P. Kanwal

CHAYFERI Introduction 1.1 Definition An integral equation is an equation in which an unknown function appears under one or more integral signs. Naturally in such an equation there can occur other terms as well. For example for $a \leq b$ and $t \in [a, b]$ the equations

$$\int_a^b f(s) \, ds = K \int_a^t g(s) \, ds \quad \text{or} \quad \int_a^b f(s) \, ds = K \int_a^t g(s) \, ds + \int_a^t g(s) \, ds$$

where the function g is the unknown function and all the other functions are known are integral equations. These functions may be complex valued functions of the real variables s and t . **Solving Problems that**
