

19.2 Patterns and Processes of Evolution

Lesson Objectives

-  Identify the processes that influenced survival or extinction of a species or clade.
-  Contrast gradualism and punctuated equilibrium.
-  Describe adaptive radiation and convergent evolution.
-  Explain the evolutionary characteristics of coevolving organisms.

Lesson Summary

Speciation and Extinction Macroevolutionary patterns are grand transformations in anatomy, phylogeny, ecology, and behavior that usually take place in clades larger than a single species.

- ▶ If the rate of speciation in a clade is equal to or greater than the rate of extinction, the clade will continue to exist. If the rate of extinction in a clade is greater than the rate of speciation, the entire clade will eventually become extinct.
- ▶ **Background extinction** is extinction caused by the slow process of natural selection. **Mass extinctions** affect huge numbers of species over a relatively short time.

Rate of Evolution Evidence shows that evolution has occurred at different rates for different organisms at different times.

- ▶ The idea that evolution occurs slowly and gradually is called **gradualism**.
- ▶ In **punctuated equilibrium**, long periods of little or no change are interrupted by short periods of rapid change.

Adaptive Radiation and Convergent Evolution **Adaptive radiation** is the process in which a single species evolves into diverse species that live in different ways. **Convergent evolution** is the process in which unrelated species come to look alike because they have evolved similar adaptations in response to similar environments.

Coevolution **Coevolution** is the process by which two species evolve in response to changes in each other over time. For example, plants evolved poisons that protected them from insects. In response, insects evolved ways of protecting themselves from the poisons.

Speciation and Extinction

- _____ 2. Many species disappear rapidly during a background extinction.
- _____ 3. The rate of speciation in a clade must be equal to or greater than the rate of extinction in order for a clade to survive.
- _____ 4. Immediately after a mass extinction, biodiversity is dramatically reduced.

Pattern and Process Michael D. Fortescue, 2001 The purpose of this book is to illustrate the relevance to linguistics today of Whitehead's philosophy of organism Although largely ignored by linguists Whitehead has in fact much to say as regards the cognitive processes underpinning language pattern His theory of symbolism conceives of language as the systematization of expression and relates meaning to feeling in the broadest sense The Whiteheadian perspective allows a synthesis of the psychological and the social approaches to language that does not fall into one or another fashionable form of reductionism The volume represents a first application of Whitehead's thinking to a broad range of linguistic phenomena ranging from speech act theory to the production and comprehension of texts from language acquisition to historical change and the evolution of language It is argued that Whitehead's holistic philosophy is uniquely suited to the view of language as an emergent phenomenon regardless of whether one's approach to cognition is via the nativist or the functionalist route

Institute,1962 **Systems Engineering for Business Process Change** Peter Henderson,2012-12-06 A very large proportion of commercial and industrial concerns in the UK find their business competitiveness dependent on huge quantities of already installed legacy IT Often the nature of their business is such that to remain competitive they have to be able to change their business processes Sometimes the required change is radical and revolutionary but more often the required change is incremental For such incremental change a major systems engineering problem arises The cost and delay involved in changing the installed IT to meet the changed business requirements is much too high In order to address this issue the UK Engineering and Physical Science Research Council EPSRC set up in 1996 a managed research programme entitled Systems Engineering for Business Process Change SEBPC I was appointed as co ordinator of the programme The overall aim of this new managed research programme was to release the full potential of IT as an enabler of business process change and to overcome the disabling effects which the build up of legacy systems has on such change As such this aim addressed a stated objective of the Information Technology and Computer Science IT CS part of EPSRC to encourage research at a system level *Index to Publications of the Iron and Steel Institute* Iron and Steel Institute,1962

Developmental Instability: Its Origins and Evolutionary Implications T.A. Markow,2012-12-06 Developmental Instability Its Origins and Evolutionary Implications is a collection of papers and transcribed discussions from a conference held in Tempe Arizona in June 1993 The papers represent a wide range of contributions from the empirical to the theoretical and include methods for measuring developmental instability across a variety of taxa and traits This volume presents contrasting views on how to assess developmental instability as well as on the relationship of instability to genotypic factors environmental factors and the action of natural and sexual selection Readers will derive a working knowledge of the best way to assess developmental instability and will be able to design future work in an authoritative way

Business Strategy Formulation Anthony W. Ulwick,1999-10-30 As the dominant paradigm of economic activity is shifting to a focus on creating customer value it is becoming increasingly clear that companies must be able to formulate business strategies product and service strategies and internal operating strategies that accelerate the creation and delivery of customer value The ability to create value has become the primary source of sustainable competitive strength With this book Ulwick introduces a strategy formulation theory and process that allows firms to create strategies that consistently produce breakthrough results The application of advanced modeling and pattern detection techniques commonly reserved for physics and the behavioral sciences is used in both the design of the theory and in the process it initiates its application can result in strategies and solutions that delivery

up to ten times more value than those created with traditional methods It is a process that can be broadly applied across an organization and a wide range of subjects or missions Ulwick describes Outcome Based Logic which can transform organizational dynamics and the way an organization approaches the process of strategy formulation and proposes a Universal Strategy Formulation Model which defines the four essential elements of strategy creation desired outcomes constraints the desired competitive position and solutions Using this model it becomes possible for an organization to first choose its desired competitive position and then work to uncover the strategy or solution that will enable it to occupy that position The book also introduces a process called the Customer Driven Mission Achievement Process CD MAP now successfully used by many large companies to formulate and assess strategies at every organizational level of their organizations This book steeped in modern business theory and backed by years of practical experience will help practitioners in any company improve their operations and their competitive position

Multidimensional Particle Swarm Optimization for Machine Learning and Pattern Recognition Serkan Kiranyaz,Turker Ince,Moncef Gabbouj,2013-07-16 For many engineering problems we require optimization processes with dynamic adaptation as we aim to establish the dimension of the search space where the optimum solution resides and develop robust techniques to avoid the local optima usually associated with multimodal problems This book explores multidimensional particle swarm optimization a technique developed by the authors that addresses these requirements in a well defined algorithmic approach After an introduction to the key optimization techniques the authors introduce their unified framework and demonstrate its advantages in challenging application domains focusing on the state of the art of multidimensional extensions such as global convergence in particle swarm optimization dynamic data clustering evolutionary neural networks biomedical applications and personalized ECG classification content based image classification and retrieval and evolutionary feature synthesis The content is characterized by strong practical considerations and the book is supported with fully documented source code for all applications presented as well as many sample datasets The book will be of benefit to researchers and practitioners working in the areas of machine intelligence signal processing pattern recognition and data mining or using principles from these areas in their application domains It may also be used as a reference text for graduate courses on swarm optimization data clustering and classification content based multimedia search and biomedical signal processing applications
