Artificial Intelligence Through Search Chris Thornton, Benedict Du Boulay, 2012-12-06 This is an important textbook on artificial intelligence that uses the unifying thread of search to bring together most of the major techniques used in symbolic artificial intelligence The authors aware of the pitfalls of being too general or too academic have taken a practical approach in that they include program code to illustrate their ideas Furthermore code is offered in both POP 11 and Prolog thereby giving a dual perspective highlighting the merits of these languages Each chapter covers one technique and divides up into three sections a section which introduces the technique and its usual applications and suggests how it can be understood as a variant generalisation of search a section which developed a low level POP 11 implementation a section which develops a high level Prolog implementation of the technique The authors also include useful notes on alternative treatments to the material further reading and exercises As a practical book it will be welcomed by a wide audience including those already experienced in AI students with some background in programming who are taking an introductory course in AI and lecturers looking for a precise professional and practical text book to use in their AI courses About the authors Dr Christopher Thornton has a BA in Economics an Sc in Computer Science and a DPhil in Artificial Intelligence Formerly a lecturer in the Department of AI at the University of Edinburgh he is now a lecturer in AI in the School of Cognitive and Computing Sciences at the University of Sussex Professor Benedict du Boulay has a BSc in Physics and a PhD in Artificial Intelligence Previously a lecturer in the Department of Computing Science at the University of Aberdeen he is currently

Professor of Artificial Intelligence also in the School of Cognitive and Computing Sciences University of Sussex **Artificial Intelligence with Common Lisp** James L. Noyes, 1992 The book provides a balanced survey of the fundamentals of artificial intelligence emphasizing the relationship between symbolic and numeric processing The text is structured around an innovative interactive combination of LISP programming and AI it uses the constructs of the programming language to help readers understand the array of artificial intelligence concepts presented After an overview of the field of artificial intelligence the text presents the fundamentals of LISP explaining the language's features in more detail than any other AI text Common Lisp is then used consistently in both programming exercises and plentiful examples of actual AI code Back cover This text is intended to provide an introduction to both AI and LISP for those having a background in computer science and mathematics Pref **Artificial Intelligence** Ela Kumar, 2013-12-30 AI is an emerging discipline of computer science It deals with the concepts and methodologies required for computer to perform an intelligent activity The spectrum of computer science is very wide and it enables the computer to handle almost every activity which human beings could It deals with defining the basic problem from viewpoint of solving it through computer finding out the total possibilities of solution representing the problem from computational orientation selecting data structures finding the solution through searching the goal in search space dealing the real world uncertain situations etc It also develops the techniques for learning and understanding which make the computer able to exhibit an intelligent behavior The list is exhaustive and is applied now a days in almost every field of technology This book presents almost all the components of AI like problem solving search techniques knowledge concepts expert system and many more in a very simple language One of the unique features of this book is inclusion of number of solved examples in between the chapters and also at the end of many chapters Real life examples have been discussed to make the reader conversant with the intricate phenomenon of computer science in general and artificial intelligence in particular The book is primarily developed for undergraduate and postgraduate engineering students **Artificial Intelligence in Chemical Engineering** Thomas E. Quantrille, Y. A.
